Poverty Amidst Plenty VI. Sixth Edition. Annapolis, MD:  
Community Foundation of Anne Arundel County 2019.

Prepared and written for the Community Foundation of Anne Arundel County  
by Dr. Pamela M. Brown with assistance from Lisa Kovacs, Martha Blaxall and Cindy O’Neill.

Copyright © Community Foundation of Anne Arundel County, 2019

# Forward

The 2018 Anne Arundel County Community Needs Assessment, *Poverty Amidst Plenty VI*, is the result of an extended collaboration between the following partners: The Community Foundation of Anne Arundel County, Anne Arundel Medical Center, University of Maryland Baltimore Washington Medical Center, Anne Arundel County Department of Health, Anne Arundel County Mental Health Agency, Anne Arundel County Partnership for Children, Youth and Families and the YWCA of Annapolis and Anne Arundel County.

The report contains summative (quantitative) data from a variety of local, state and national sources. Population and socio-economic statistics were compiled using data from the United States (U.S.) Census Bureau’s Population Estimates Program and the American Community Survey 1-Year and 5-Year Estimates. This data should be considered less reliable due to the gap of eight years since the last full census. All data here is based on census estimates. Birth and death data files were obtained from the Maryland Department of Health and Mental Hygiene, Vital Statistics Administration. The emergency department and inpatient hospital discharge data files were obtained from the Maryland Health Services Cost Review Commission for topics like birth, mortality and hospital utilization. Other data sources used for this report were: Maryland Vital Statistics Annual Reports, Maryland Department of Health and Mental Hygiene’s Annual Cancer Reports, Behavioral Risk Factor Surveillance System (BRFSS), Centers for Disease Control and Prevention’s CDC WONDER Online Database, Centers for Medicare and Medicaid Services, National Vital Statistics Reports and County Health Rankings, and a variety of local databases. The specific data sources are listed throughout the report.

The report draws on qualitative data gathered from 26 key informants and 11 focus groups. Focus group areas included emergency department personnel, low income youth, behavioral health providers, Hispanic residents, advocates, domestic violence victims and a host of others representing a total of 185 participants. The author thanks Lisa Kovacs, Administrative Coordinator at the Anne Arundel County Partnership for Children, Youth and Families, for the hours of transcription time spent ensuring this Needs Assessment accurately represents the voices of our community. The data was read and reread until dominant themes emerged which became the subtext of the report. All participants gave permission for their words to be used in the final report, although their identities are protected. The author would also like to thank Cindy O’Neill and Martha Blaxall for the hundreds of hours they spent editing and refining this report.

## ABOUT THE AUTHOR

Dr. Pamela Brown is currently the Executive Director of the Anne Arundel County Partnership for Children, Youth and Families. She completed her Ph.D. in Educational Leadership at Florida Atlantic University. Her dissertation focused on the importance of community partnerships in diverse neighborhoods. She is a Dissertation Chair for the University of Phoenix specializing in qualitative case study methods. She is certified to conduct ethical research through the Collaborative Institutional Training Initiative at the University of Miami. She has been conducting community needs assessments for over 20 years. The author takes full responsibility for the interpretations and analyses represented here. They do not necessarily represent the interpretations or the views of the Community Foundation of Anne Arundel County, the Anne Arundel County Partnership for Children, Youth and Families, or the staff, boards, officers, or donors of these organizations.

The Community Foundation of Anne Arundel County (CFAAC) is pleased to present the 2018 needs assessment *Poverty Amidst Plenty VI* to the residents of Anne Arundel County. The purpose of this report is to provide an overview of the issues in Anne Arundel County that impact the economy and quality of life. CFAAC is deeply grateful to Dr. Pamela Brown and the Anne Arundel County Partnership for Children, Youth, and Families for their extensive work in compiling data and drafting this report.

CFAAC’s mission is to connect people who care with causes that matter in our community. The report intends to increase knowledge and awareness, as well as to frame informed discussions about persistent local trends and needs. This report is also meant to inform fund holders, donors, nonprofit grantees, professional adviser partners, and all stakeholders in the county about the challenges facing our community and the importance of their participation in critical conversations focused on transforming and strengthening our community.

CFAAC is dedicated to convening both private and public sectors – individual, family and corporate philanthropists, civic and faith-based organizations, nonprofits, community advocates, volunteers, business leaders, elected officials, policymakers, government agencies, foundations, professional advisors, and others – to prioritize and develop strategies and implementation plans with measurable goals to address the most pressing needs of our community.

We believe that by tracking key measures of community well-being, and developing a common vision for Anne Arundel County supported by shared commitment and strong leadership, dynamic partnerships across all sectors can be forged to determine real community solutions. To support these efforts, CFAAC plays an important role by continuing to build a permanent source of philanthropic assets to sustain nonprofit agencies and the important work they do.

Founded in 1998, CFAAC is the largest institutional funder of nonprofits in Anne Arundel County. With over \$14 million dollars in assets, and \$2.3 million dollars in grants made in 2018 alone, CFAAC remains committed to providing an increasingly powerful pool of resources to sustain the kind of impact that strong philanthropic support can achieve in a community.

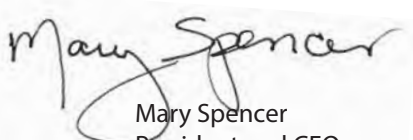

Since the last community needs assessment report done in 2016, the most pressing community needs have remained constant. Affordable housing and child care, quality health care, jobs that pay a living wage, and the availability of transportation continue to be identified as key determinants to a strong and thriving community in Anne Arundel County. Newer concerns have swept across our county as well, including the increasingly devastating effects on the lives of those impacted by the opioid crisis. Additionally, the too-close-to-home threat of gun violence has increasingly jumped to the forefront, affecting our entire community, especially in light of the tragic shooting at the Capital Gazette Newspaper office on June 28, 2018. The federal and state laws associated with the national issue of gun violence, and the political landscape affecting those laws, is beyond the scope of this community needs assessment report. Knowing that Anne Arundel County is engaged with federal, state, and other local authorities in looking at this as a public health issue is an indication of the next steps in the local community, and broader, conversation. Correlations between mental health issues, drug and alcohol abuse, poverty, and increases in gang activity, among other things, all would seem to play a part in the growing concern over gun violence in our community and in our country.

With knowledge comes power, and it is our hope that the information contained in this report sparks powerful conversations and meaningful progress toward achieving a healthy and strong community for all of the residents of Anne Arundel County.

Together we remain steadfast and committed to Achieving Progress for All.

James P. Nolan  
Chair, Board of Trustees

Mary Spencer  
President and CEO

# Summary of Principal Findings

**Population:** The Anne Arundel County population has grown 15.3 percent since 2000 to 564,600 residents. The county's population is aging. Those over the age of 65 have increased since 2014 while the percentages of those 19 and under have decreased slightly.

**Hispanic Population:** The Hispanic population is growing more significantly than all other races/ethnicities and is now at 7.3 percent (41,275 residents) of the county's population. The County has the fourth largest Hispanic population, by percentage, among Maryland counties. The location of the Hispanic population in the county is uneven, with a high of just over 20 percent of the population of the City of Annapolis.

**Poverty:** As of 2018, a family of four (two adults, two children) with an annual income below \$25,100 is defined as living in poverty by the federal government. There are roughly 33,000 Anne Arundel County residents (6.1 percent) living below the poverty level. There are 31,377 households led by single parents, of which 22,565 have a female as the head of household. Estimates suggest nearly 15 percent of the single parent households in the county make an income that is below the federal poverty level.

**The Income Gap:** The gap between rich and poor continues to widen. The number of resident households with an income above \$200,000 has grown by over 38 percent while the number of households with an income below \$25,000 has shrunk, but only by 1.8 percent. The 2018 median household income for the county stood at \$99,652; 19 percent more than the state and 65 percent more than the nation.

**Economic Opportunity:** Anne Arundel County is the fifth largest jurisdiction in the state in terms of population yet it has the third largest economy at \$36 billion. There are approximately 15,000 businesses within county boundaries. The median home price has increased 6.6 percent since 2017 with an average value of \$325,333. The unemployment rate has dropped from almost 7 percent in 2010 to 2.8 percent at the end of 2018.

**Transportation:** The lack of public transportation continues to be a major issue for the county. The majority of county residents (80 percent) drive to work alone in their cars every day; 7.7 percent car pool, two percent walk, and two percent take a bus. There are now five regional transit routes, eight Annapolis routes, four local bus routes, and four commuter bus routes. Additionally, there are two pilot bus routes in South County. Nonetheless, public transportation continued to be a major concern for all participants in this needs assessment. There are large areas of the county that are underserved (or not served at all), including North and West County.

**Housing:** As of September 2018, the median home sale price was \$345,000, an increase of 10 percent or \$30,000 compared to last year. Renters account for 26.4 percent or 52,948 of the 203,336 households in the county. Of those renters, 24,172 or 45 percent are overburdened. Renters are considered overburdened when they pay more than 30 percent of their gross income in rent. There is a decreasing amount of public and subsidized housing in the county. There are 10,278 county families on the waiting list for Housing Choice Vouchers and 17,683 families on the waiting list for public housing. There are 1,514 families on the Annapolis public housing wait list.

**Homelessness:** Homelessness is a continuing concern for individuals and families in the county. The county served 1,684 homeless individuals in 2017. There are still only three homeless shelters in the county and three rapid rehousing programs. In 2018, 1,260 homeless youth were identified in the county public school system.

**Child Care:** Child care continues to be a huge issue for those seeking employment, especially single parents. The average cost of family day care for two children is over \$20,000 per year, more for a child care center. The distribution of child care centers is uneven across the county. There are none in Brooklyn Park, Harmans or Shadyside. The numbers of family day care providers are dropping and that trend is predicted to continue until 2022.

**Youth Development:** There are 127,512 children under the age of 18 living in Anne Arundel County. Of those, 35,002 (27.4 percent) are under five years of age, and over 12,000 (10 percent) live below the federal poverty level; an increase of two percent since 2015.

- In 2015, a new kindergarten readiness tool was introduced to Anne Arundel County Public Schools: Ready4Kindergarten or R4K. While scores have slightly improved from a low of 43 percent in 2015, the 2018 score of 48 percent shows less than half of county children are ready for kindergarten.
- In the 2018 Maryland school district rankings, Anne Arundel County ranked 13th of 24 school districts based on the most recent standardized test scores. Over 80 percent of Anne Arundel County 8th graders are not meeting standards in math and less than half are meeting standards in reading.
- There are still gaps in achievement related to race, ethnicity, income, disability, and Limited English Proficient students. However, between 2010 and 2016, African American students have shown an 8.56 percent improvement, and Free and Reduced Meal Students (FARMS) have shown a 7.96 percent improvement in graduation rates.
- The county's chronic truancy or habitual absenteeism rate has risen across all grade levels and student populations. Children from low income families who receive free lunch (FARMS) have the highest levels of chronic truancy, an increase of three percent since 2014.
- The overall county unemployment rate for youth ages 17 to 24 stands at 13.6 percent. The rate of youth unemployment for African Americans stands at 25 percent, almost double that of the overall rate.

**Health:** County life expectancy has risen to 79.6 years. In 2017, cardiovascular disease was the leading cause of death followed by cancer. Accidental (unintentional injury) deaths are the fifth leading cause of death, driven most likely by increases in opioid overdose deaths. Cardiovascular disease accounted for about 31 percent of all county deaths in 2017, an increase of almost 10 percent since 2013.

**Mental Health:** There has been a 70 percent increase in residents seeking mental health services since 2012; 16,348 residents were served by the county mental health agency in 2018. The two highest increases in numbers served are the early childhood population and those over 65. Increased mental health and behavioral issues in the birth to five early childhood population are causing widespread concern in every system. The county's hospital emergency departments are often the receiving facilities for behavioral health issues. In 2017, there were 12,446 behavioral health encounters; mood disorders accounted for 26.3 percent of those.

**Substance Abuse:** In 2018, Anne Arundel County police reported almost 1,100 opioid-related overdoses occurring within the county, a 171 percent increase since 2014. Fentanyl-related deaths in the county have increased significantly since 2013 and surpassed heroin related deaths in 2018. The current opioid crisis has many victims. The number of newborns assessed positive for substances in their systems, including methadone, has risen 144 percent since 2014 from 74 to 181. Grandparents and great grandparents are raising children with little governmental help.

**The Environment:** The annual State of the Bay Report from the Chesapeake Bay Foundation tracks several indicators detailing the overall health of the Bay. The record precipitation that fell in Maryland in 2018 led to an overall increase in pollution in the Bay and other waterways. Despite many efforts by federal, state, and local governments and other interested parties, pollution in the Bay does not meet existing water quality standards. All of the county's waterways are considered "impaired" because of excessive levels of major contaminants, which are largely a result of untreated storm water runoff.

**Social Media:** The use of social media, including the active use of smart phones and tablets, is a major concern for residents and professionals in every area of the county. The constant access to electronic information is impacting every age group and demographic. Babies as young as 12 months have been observed in the county holding iPhones and tablets. One early childhood provider described this as "soothing by cell phone".

Anne Arundel County is the fifth largest county in Maryland, covering 415 square miles with 534 miles of natural shoreline. For the majority of residents it is a wonderful place to live. Most recent household median income estimates stand at \$99,652.<sup>1</sup> The unemployment rate as of December 2018 is 2.8 percent, lower than the state average of 3.4 percent.<sup>2</sup> However, there are 33,246 Anne Arundel County residents (6.1 percent) living below the poverty level. The rate of poverty for children is much higher at 9.3 percent. Single female head of household numbers are even higher, and there are racial disparities. Nearly 15 percent of White and 20 percent of African American single female head of households are at or below the poverty level.<sup>3</sup> Economic distress is spread unequally throughout the county, with pockets of low income and poverty level families clustered in North and South County areas and in Annapolis.

In 2018, residents are most concerned about the heroin/opioid crisis, youth gun and gang violence, behavioral issues among the very young, and the impact of social media on every facet of our lives and the lives of our children. Participants in this needs assessment agreed that lack of transportation was the most often cited barrier to success in Anne Arundel County. Transportation impacts all facets of life, from accessing appropriate medical care to acquiring and retaining employment. The lack of quality, affordable child care and affordable housing are continuing barriers for poverty-level and low income families as they try to move towards self-sufficiency.

Population Demographics

The most recent census estimates on the diversity of the county illustrate a diminishing White, Caucasian population. The Hispanic population has grown 219 percent since the year 2000 (Table 1). The most common foreign languages in Anne Arundel County are Spanish (26,124 speakers), Tagalog (2,810 speakers), and Korean (2,751 speakers). Compared to other places, Anne Arundel County has a relatively high number of individuals who speak Greek (737 speakers), Korean (2,751 speakers), and African languages (2,387 speakers).<sup>4</sup>

Table 1

Ethnic/Racial Composition Anne Arundel County, 2000-2017							
	2000		2010		2017		% Change 2000-2017
	Number	%	Number	%	Number	%	
Total Population	489,656	100	537,656	100	564,600	100	15.3
Non-Hispanic Whites	390,519	79.8	405,456	75.4	393,139	69.6	0.6
Other Races	99,137	20.2	132,200	24.6	171,191	30.3	72.6
Hispanic or Latino	12,902	2.6	32,902	6.1	41,275	7.3	219.9
Black or African-American	65,755	13.4	83,484	15.5	89,365	15.9	77
Other*	20,480	4.2	15,814	3	40,551	7.1	98

U.S. Census Bureau, American Community Survey, 2016. “Other” here includes “American Indian and Alaskan Native and “Asian,” “Native Hawaiian or other Pacific Islander,” “Some other race,” or “Two or more races.” Therefore, the “White” and “Black” figures are those who were counted as “White alone” or “Black alone.”

<sup>1</sup> U.S. Census Bureau, 2013-2017 American Community Survey 5-Year Estimates, 2018.  
<sup>2</sup> Maryland Department of Labor, Licensing and Regulation, Local Area Unemployment Statistics, 2019.  
<sup>3</sup> U.S. Census Bureau, American Community Survey 2013-2017 5-year Estimates.  
<sup>4</sup> Ibid.

Anne Arundel County has an aging population. Since 2014, the percentage of residents over the age of 65 has increased while the percentage of residents 19 and under have decreased slightly (Figure 1.)

Figure 1

Anne Arundel County Economic Development Corporation, 2018

The Hispanic Community

While the White Caucasian population of the county continues to diminish, the Hispanic population is growing more significantly than all other races/ethnicities and is now at 7.3 percent, still lower than the state average of 9.8 percent.<sup>5</sup> The county has the fourth largest Hispanic population by percentage among Maryland counties. The distribution of the population is uneven in the county, with a high of 20.3 percent in the City of Annapolis. The largest sector of the Hispanic population is from Central American countries, including a growing population from El Salvador. This is significantly different from the overall U.S. Hispanic population, which is overwhelmingly Mexican (63 percent).<sup>6</sup>

Traditional governmental systems, from the city and county police departments to the public schools and health systems, are struggling to adequately respond to this growing Spanish-speaking population. Only seven Annapolis City and nine county police officers speak Spanish, and only nine percent of full-time civilian personnel speak spanish.<sup>7</sup> The public school system has a shortage of teachers for English Language Learners.<sup>8</sup> The county mental health agency reports a woeful lack of Spanish-speaking counselors. There is only one Spanish-speaking psychiatrist in the county.<sup>9</sup>

<sup>5</sup> Pew Research Center, Hispanic Trends: Anne Arundel County, Maryland, 2016.  
<sup>6</sup> Flores, Antonio, How the U.S. Hispanic Population is Changing, Pew Research Center, 2017.  
<sup>7</sup> City of Annapolis Police Department, 2017.  
<sup>8</sup> Anne Arundel County Public Schools, 2018.  
<sup>9</sup> Anne Arundel County Mental Health Agency, 2018.

Community focus group participants in this Needs Assessment noted the following general trends in the Hispanic community:

- The Hispanic community lives in clusters within the county, in close proximity to public and subsidized housing and low rent private accommodations. Many family members live together in overcrowded conditions; some townhouses hold up to four families. Approximately 90 percent of families are sharing homes.
- Many Hispanic residents are actively seeking English lessons, but the lack of transportation to the community college or Centro de Ayuda, and the lack of time due to long working hours, are barriers.
- Children of Hispanic families spend many hours alone as the parent/caregiver often works two or three jobs. School personnel and others report that hunger is a problem for some of the children. Several respondents noted the man of the family is rarely present in the home. They work seasonal and low paying jobs with long hours.
- Focus group participants stated that many Hispanic parents are scared to allow their children to stay for after-school activities due to immigration and gang-recruitment concerns.
- Many Hispanic residents are living in a state of constant fear of ‘the knock on the door’ that could signal a return to their country of origin. The large El Salvadoran population has created a well-documented MS-13 gang presence that has led to the development of an active city/county gang taskforce. However, the number of Hispanic residents involved in gang activity is extremely small. Some of the Hispanic residents now living in Annapolis left El Salvador specifically to get away from gangs, only to find themselves re-recruited here. Law enforcement officials in both the City of Annapolis and Anne Arundel County are working diligently to combat gang activity.

Income

The gap between rich and poor continues to widen. The number of resident households with an income above \$200,000 has grown by over 38 percent. Those households with an income below \$25,000 have shrunk, but only slightly (Table 2). According to the most recent estimates by the Anne Arundel County Economic Development Corporation (2018), the median household income for the county now stands at \$99,652; 19 percent more than the state and 65 percent more than the nation.

Table 2

Estimated Annual Household Income Numbers 2010-2016					
Totals	2010 195,999		2016 204,829		
Per Households	Number	%	Number	%	Percent Change
Less than \$25,000	20,819	10.7%	20,439	10%	-1.8%
\$25,000 - 34,999	12,201	6.2%	10,875	5.3%	-10.9%

U.S. Census Bureau, American Community Survey, 2016 Estimates

Poverty

The Federal Government determines the official United States poverty rate. As of 2018, a family of four (two adults, two children) with an annual income below \$25,100 is living in poverty. There are 32,368 Anne Arundel County residents (6.1 percent) living below the poverty level; the trend line is up slightly since 2014 (Table 3). There are 31,377 households led by single parents, of which 22,565 have a female as the head of household. Economic well-being for households headed by a single parent can be fragile. Estimates suggest 14.7 percent of the single parent households in the county make an income that is below the federal poverty level.

Table 3

Poverty Status Anne Arundel County (2014-2017)								
	2014		2015		2016		2017	
	# below poverty level	% below poverty level	# below poverty level	% below poverty level	# below poverty level	% below poverty level	# below poverty level	% below poverty level

Asian alone	1,744	9.1%	1,524	7.8%	1,423	7.2%	1,280	6.3%
Hispanic or Latino origin (of any race)	3,165	8.9%	3,018	8.2%	3,643	9.5%	4,176	10.4%

U.S. Census Bureau, American Community Survey Estimates 2017

Poverty continues to be concentrated in the north and south of the county (Table 4). The highest percentage of poverty is in the ZIP Code that contains Brooklyn Park at a staggering 27.3 percent, followed by Curtis Bay at 16.6 percent; both areas border Baltimore City. In South County, Deale has almost twice the level of poverty as the county average.

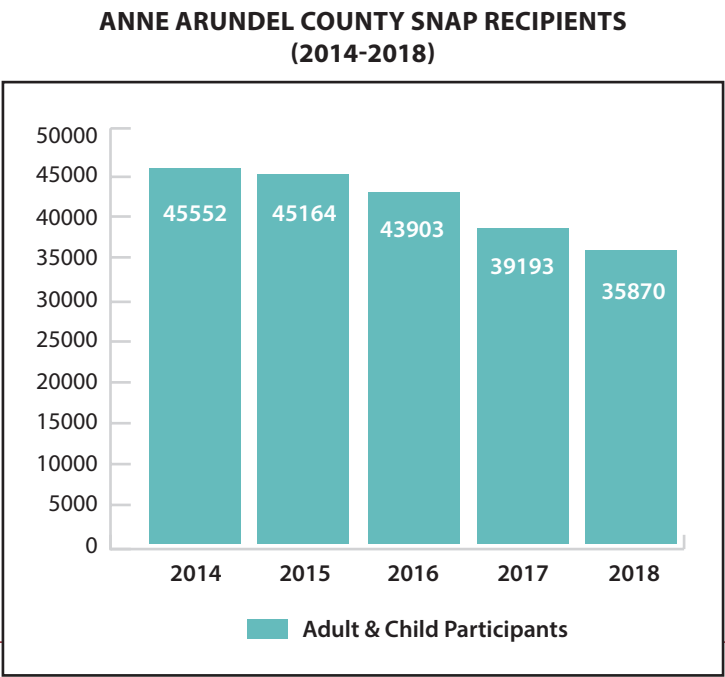

Table 4

Selected Poverty Percentages by Zip Code in Anne Arundel County (2016)		
Zip Code	Area	Poverty Percentage
21225	Brooklyn Park	27.3%
21226	Curtis Bay	16.6%
21060	Glen Burnie (East)	7.9%
21061	Glen Burnie (West)	9.2%
20751	Deale	10.8%
	Anne Arundel County	6.1% (2018)

U.S. Census Bureau, American Community Survey, Estimates 2016 and 2017

Data about low income residents can also be measured by the numbers receiving (what used to be called food stamps and is now the Supplemental Nutrition Assistance Program (SNAP). SNAP participation is down 21 percent since peaking in 2014 at 45,552 (Figure 2). This is partly due to reinstated work requirements and a decrease in adult eligibility, as well as the improving economy.

Figure 2

Anne Arundel County Department of Social Services, 2018

According to the 2016 U.S. Census Bureau American Community Survey estimates, SNAP recipients are spread unevenly across the county (Figure 3) with the largest number in North and South County areas and Annapolis.

Figure 3

ANNE ARUNDEL COUNTY SNAP RECIPIENTS (2016)

U.S. Census Bureau, American Community Survey, Estimates 2016

According to the Centers for Disease Control, high poverty and concentrated neighborhood disadvantage increases the likelihood that a child will suffer abuse and neglect.<sup>10</sup> In Anne Arundel County, an average of 481 children per month were abused or neglected from July 2017 through June 2018, an increase of about 25 percent since 2014.

Table 5

Counties in Maryland with the Highest Number of Child Maltreatment Reports (2018)	
	Monthly Average from July 2017-June 2018
Prince George's	734
Baltimore City	559
Montgomery	481
Anne Arundel	471
Baltimore County	370

Maryland Department of Human Resources, 2018

The number of Anne Arundel County families receiving in-home services from county social services has risen every year since 2014. Most alarming, the number of newborns exposed to illegal substances has increased 158 percent since 2014 (Table 6).

Table 6

Anne Arundel County Child Welfare Key Indicators (2014 to present)					
	2014	2015	2016	2017	2018 (Jan. - Sept.)
Families Receiving in Home Services	483	607	662	753	625

The Environment

Anne Arundel County is a place of natural beauty that can be enjoyed through two state parks and 70 county parks linked by an extensive network of recreation and transportation trails. With 534 miles of linear coastline, the county ranks second for waterfront in the state.

The Chesapeake Bay is perhaps Anne Arundel County’s most treasured natural resource, constituting the largest estuary in the United States. The annual State of the Bay Report from the Chesapeake Bay Foundation tracks several indicators detailing the overall health of the Bay (Table 7). The record precipitation that fell over the region in 2018 led to increased pollution, nitrogen and phosphorus levels in the Bay. The Bay did show some positive signs of health and resiliency despite the weather challenges, although it remains a fragile estuary.<sup>11</sup>

Despite many efforts by federal, state, and local governments and other interested parties, the amount of pollution in the Bay does not meet existing water quality standards. According to the Anne Arundel County Department of Public Works, all of Anne Arundel County’s waterways are considered “impaired” because of excessive levels of major contaminants, which are largely a result of untreated stormwater runoff. All stormwater runoff ends up in nearby streams, rivers and eventually the Chesapeake Bay without prior treatment. Since stormwater comes into contact with litter, gasoline, oils, brake pad dust from our cars, pesticides, waste from our pets, and many other toxins along its journey, stormwater is a significant source of pollution to our waterways.

Many Anne Arundel communities are within one mile of the Bay shoreline. The county has 500 miles of Chesapeake Bay shoreline and a wealth of waterways, including the Magothy River, the Upper Patuxent River, the Rhode River, the Severn River, the South and West Rivers, and the Patapsco River.

Table 7  
CHESAPEAKE BAY HEALTH INDICATORS 2018 COMPARED TO 2016

Chesapeake Bay Foundation, 2018

<sup>11</sup> Chesapeake Bay Foundation, *State of the Bay*, 2018.

The Anne Arundel County Department of Health identified five potential groundwater problem areas for water quality within the county due to saltwater intrusion, volatile organic compounds (VOCs), and elevated levels of nitrate, radium, arsenic, and cadmium. The areas are Annapolis Neck, Gambrills Area, Northern Anne Arundel County (generally all areas north of U.S. Route 50), the Fort Meade/Odenton Area and the Annapolis/Edgewater Peninsula.

As of August 2018, 19 public schools had unacceptable levels of lead in their drinking water. Although the Centers for Disease Control do not set an unsafe level of lead, the U.S. Environmental Protection Agency recommends water should be shut off at any faucet where lead levels exceed 20 parts per billion. Children are especially susceptible to lead poisoning. It can result in an array of negative health affects including reduced IQ, impaired growth, hearing loss, and severe neurological problems. At Glen Burnie High School, 71 water outlets tested above that level. Nineteen elementary schools had at least one faucet at an unacceptable lead level; all are located in North County. (Table 8). The testing is on going throughout the county.

Table 8

Maryland Department of the Environment, 2018

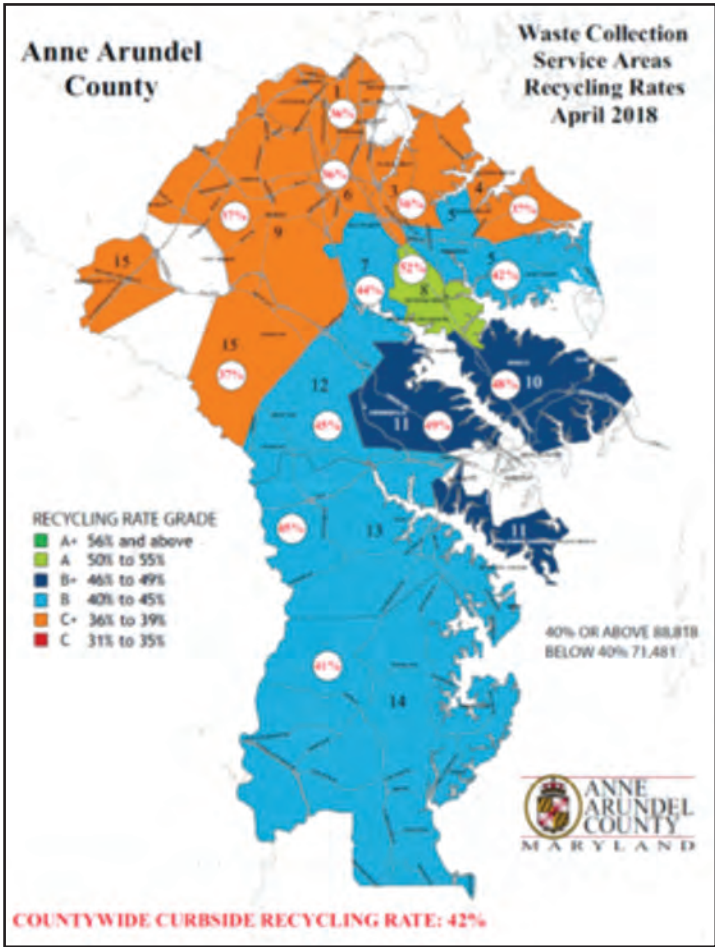

Air quality is another concern for the county. Anne Arundel scored an “F” on the American Lung Association’s “State of the Air” report in 2018 for an average of 13 high ozone days per year between 2014 and 2016, a reduction from 23 days in 2013.<sup>12</sup> High ozone causes respiratory harm (e.g. worsened asthma, worsened COPD, inflammation), can cause cardiovascular harm (e.g. heart attacks, strokes, heart disease, congestive heart failure) and may cause harm to the central nervous system.

Recycling is a way to protect the environment and reduce pollution. According to the Anne Arundel County recycling program, the county average recycling rate is 42 percent. As of April 2018, the Severna Park area has the highest rate at 52 percent and is the only area to receive an “A”. Brooklyn Park and parts of North County have the lowest rate at 36 percent.

Figure 4

WASTE COLLECTION SERVICE AREAS RECYCLING RATES AS OF APRIL 2018

Anne Arundel County Department of Public Works, 2018

While our Bay and watersheds are improving, air quality is still an issue for vulnerable residents. Newly required testing for lead pollution in the drinking water at public schools points to the need for public action, especially at the elementary level when children are most susceptible.

Summary

In 2018, Anne Arundel County is still a land of plenty. Low unemployment, high median household income, growing cultural diversity and acres of natural beauty make the county a desirable place to live. However, deep and stubborn pockets of poverty to the south and north of the county and in the City of Annapolis, require focused attention. As one administrator noted:

“There is a lot of suffering, there are a lot of people with challenges in this community and as good a job as we’re doing, these problems are not going to be solved overnight.”

Although this report focuses on all of Anne Arundel County, it should be noted that there are four distinct quadrants in the county that differ considerably in economic and social characteristics.

**North County** is the most densely populated area in the county, with a healthy mix of residential, commercial and industrial development. North County (specifically Glen Burnie, Brooklyn and Pasadena) touches the edges of Baltimore City and shares its issues related to urban poverty. North County has the highest population of residents living in poverty, the highest rate of substance abuse in the county, and has the highest rate of parental incarceration. Much of the area is a food desert, with few locations where healthy food can be purchased.

**South County**, a region generally defined as that part of Anne Arundel County south of the South River. Much of South County is wealthy, including Davidsonville and communities along the waters of the Bay, and much of it below Edgewater is largely rural. There are several small pockets of poverty in South County that lack access to jobs, health care, transportation, and affordable housing. Many families in these poor communities suffer from poor health, lack of access to healthy food, and chronic truancy. The large number of South County opioid overdoses and deaths, relative to population size, also characterize areas surrounding Deale and Lothian.

**Annapolis**, as the state capital, thrives economically on government activity, but is also known for its maritime and tourism businesses. The city is located on the Chesapeake Bay at the mouth of the Severn River. The growth of the Hispanic community in Annapolis has strained many social service, healthcare, school, and law enforcement resources. The city has a high proportion of public housing and other subsidized housing, most of which is in need of repair and/or replacement. With no transportation and little affordable childcare, most families in public housing have become mired in intergenerational poverty.

**West County**, dominated by the military installation of Fort George G. Meade (Fort Meade), has experienced much greater economic growth than any other part of the county, fueled by job and operational additions at Fort Meade, the National Security Agency, Baltimore Washington International Thurgood Marshall Airport (BWI Airport) and the Arundel Mills complex featuring Maryland Live! Casino and Hotel. The rapid economic growth in West County has put pressure on many county schools and other services.

<sup>12</sup> American Lung Association, *State of the Air Report*, 2018.

Anne Arundel County is a significant economic force in the Baltimore-Washington Metropolitan Area. Annual economic activity now exceeds \$36 billion, the third largest economic entity in Maryland.<sup>1</sup> Its population base is estimated at about 565,000, the fifth highest in the State.<sup>2</sup> Approximately 15,000 businesses — government agencies, technology firms, healthcare facilities, construction companies, hotels, entertainment centers, restaurants, retail outlets, and agricultural entities are located within county boundaries.<sup>3</sup> These industries have grown substantially since the Great Recession of 2008-2010.

Employment

The overall effect of recent economic growth has been beneficial for Anne Arundel County. State of Maryland data show continuing improvement from the end of December 2014 to the end of December 2018. As shown in Table 9, the total number of individuals employed in the county grew 17 percent during this period, and the average weekly wage from December 2014 to December 2017 increased 7.6 percent. The service industry remains the largest single employer in the county, with an average of 194,879 jobs followed by trade, transportation, and utilities with 57,013 jobs. The top wage earning jobs in the county are in manufacturing, where there are currently 11,843 jobs. The county’s largest single private employer, Northrop Grumman, is a manufacturing employer. Fort George G. Meade is the county’s largest employment center.<sup>4</sup>

Table 9

Anne Arundel County Employment Growth, 2014-2018						
Date	December 2014	December 2015	December 2016	December 2017	December 2018	percent change 2014-2018
Number Employed	258,125	264,231	271,011	297,640	301,207	17 %
Average Weekly Wage	\$1,094	\$1,144	\$1,159	\$1,177	n/a	7.6 % (2014-2017)

Unemployment

Anne Arundel County’s employment growth during the last five years has reversed the high unemployment rates experienced during the Great Recession, as shown in Figure 5.

Figure 5

Bureau of Labor Statistics, MD Office of Workforce Information & Performance  
(Seasonally unadjusted data)

By December 2018, the county’s unemployment rate (not-seasonally adjusted) has declined to 2.8 percent, almost half of the levels seen in 2012. Unemployment rates vary by zip code. The northeast part of the county represented by Glen Burnie, Brooklyn Park, and Pasadena has the highest rate of unemployment (Figure 6). These areas represent parts of the county that contain a significant number of low income residents and those living in poverty. Inadequate transportation to and from potential employers and lack of affordable child care contribute to the chronic unemployment and low wage opportunities that characterize the economic conditions in much of these geographic areas. It is often easier for residents of Baltimore City to commute to these communities for jobs than it is for current residents to find local transportation to them. As one resident indicated in a focus group:

“The problem we still have countywide is transportation....public transportation is almost non-existent in West County. Certainly not enough to get people to jobs and places they need to go....the lack of transportation hasn’t changed since 2015.”

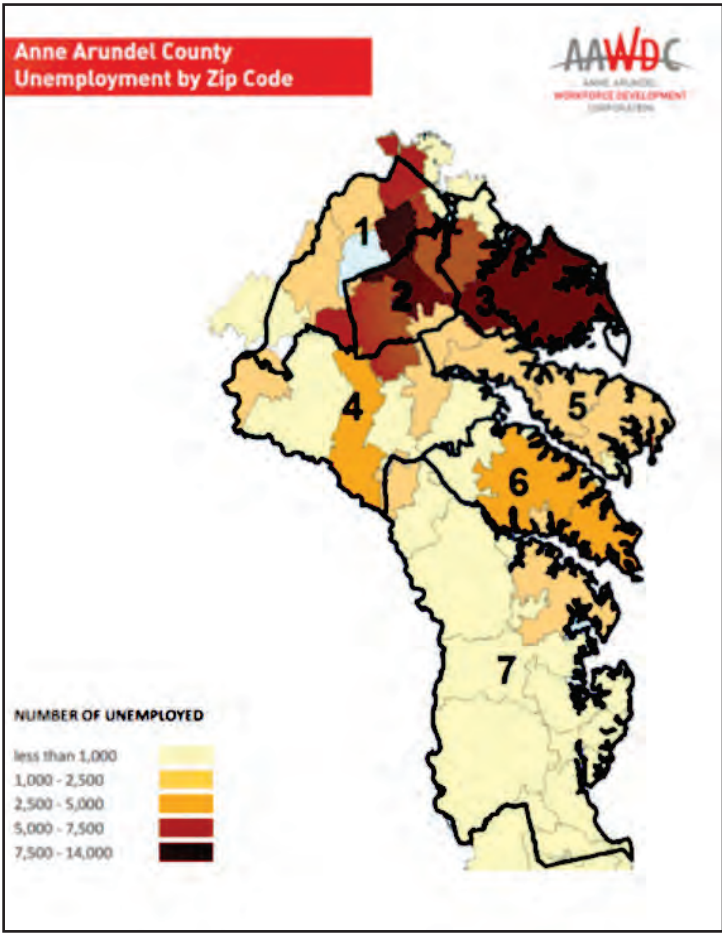

Income Distribution and Poverty

Anne Arundel County as a whole is a wealthy county. The median household income in 2018 reached \$99,652,<sup>5</sup> higher than that of Maryland (\$80,776) and of the United States (\$60,336).<sup>6</sup> About 92 percent of the population over age 25 has at least a high school diploma, and almost 40 percent of the population has a Bachelor’s or post-graduate degree.<sup>7</sup>

While the majority of county residents are economically secure, there were still about 34,314 county residents estimated to be living in poverty at the end of 2017.<sup>8</sup> A little over a quarter of these individuals were age 17 or younger.<sup>9</sup>

The current federal poverty guideline is \$25,100 for a family of four. Anne Arundel County residents deemed to be living in poverty have incomes far below the level of the median household income for the county. Families living in poverty also earn well below the “Living Wage Incomes” as defined by Massachusetts Institute of Technology (MIT) to be the minimum incomes that can provide a semblance of comfort for a working family.

Figure 6

Anne Arundel Workforce Development Corporation, 2018

The Living Wage Model

Anne Arundel County has a high cost of living, including high rents and high real estate costs. The Living Wage Model, developed at the MIT, is a tested measure of required income given a geographic location. It is a market-based approach that examines specific expenditure data related to a family’s likely minimum costs for food, child care, health insurance, housing, transportation, and other basic necessities. It offers a comparison between what a family in Anne Arundel County has to live on at the federal poverty level, Maryland’s minimum wage of \$9.25 per hour (2017 rate); the higher 2018 rate of \$10.10 per hour and what a minimum living wage would realistically be (Table 10). The living wage shown is the hourly rate that an individual must earn to support their family if they are working full-time (2,080 hours per year). The state minimum wage is the same for all individuals, regardless of how many dependents they may have. The poverty guideline, shown in Table 10, is typically quoted as gross annual income. It has been converted to an hourly wage for comparison purposes.

Table 10

Living Wage Calculation for Anne Arundel County, 2017				
Family Size	Poverty Hourly Wage	Maryland Minimum Hourly Wage	Living Hourly Wage	Required Living Wage Annual Salary
1 Adult	\$5.00	\$9.25	\$13.28	\$28,479
1 Adult 1 Child	\$7.00	\$9.25	\$28.46	\$60,010
1 Adult 2 Children	\$9.00	\$9.25	\$32.27	\$69,083
1 Adult 3 Children	\$11.00	\$9.25	\$40.24	\$84,972
2 Adults (1 Working) 1 Child	\$9.00	\$9.25	\$25.38	\$44,953
2 Adults (1 Working) 2 Children	\$11.00	\$9.25	\$28.35	\$54,678
2 Adults (1 Working) 3 Children	\$13.00	\$9.25	\$31.69	\$67,399
2 Adults (both working) 1 Child	\$4.00	\$9.25	\$15.09	\$64,710
2 Adults (both working) 2 Children	\$5.00	\$9.25	\$17.67	\$74,603
2 Adults (both working) 3 Children	\$6.00	\$9.25	\$20.44	\$86,623

Living Wage Calculator, MIT 2017

The Living Wage rates have increased considerably since 2014. A single adult in 2017 needed to earn \$13.28 per hour to be self-sufficient, an increase of almost 11 percent since 2014. A single adult with one child had to earn \$28.46 per hour, an increase of almost 14 percent since 2014. The average teacher in Anne Arundel County made only \$23.74 per hour in 2017, with a small raise in 2018. There are many job opportunities in the county that do not offer even \$12 per hour.<sup>10</sup>

Protective Service	\$46,621	Transportation & Material Moving	\$35,357

Source: MIT Living Wage Calculator for Anne Arundel County, 2018

The Geography of Poverty

Low income families live predominantly in pockets of poverty to the south and north of the county and in Annapolis. Table 12 shows several zip codes with poverty areas greater than the county average.

**North County** has the highest population of residents living in poverty, (a staggering 27.3 percent in Brooklyn Park), as shown in Table 12. The most recent estimates show child poverty at 23 percent. This part of the county also has the highest rate of parental incarceration; 4,203 individuals with children were incarcerated in Anne Arundel County jails in 2017, over 40 percent of whom have a home address in one of four communities in North County.<sup>11</sup> As one North County participant noted:

“Some kids come to school because it’s a safe place and a place to eat and has someone who cares about them.”

Much of North County is a food desert, with few locations where healthy food can be purchased. North County also has the highest rate of substance abuse in the county.

<sup>11</sup> Anne Arundel County Jail, 2018.

Table 12

Selected Poverty Percentages and Median Household Income by ZIP Code Anne Arundel County, 2017			
Zip Code	Area	Poverty Percentage	Median Household Income
21225	Brooklyn Park	27.3%	\$41,904
21226	Curtis Bay	16.6%	\$73,438
21060	Glen Burnie (East)	7.9%	\$69,388
21061	Glen Burnie (West)	9.2%	\$65,321
	Anne Arundel County	6.10% (2017 estimates)	\$94,502

Source: Poverty Percentages were supplied by the Maryland Department of Health; Median Household Income is from the U.S. Census Bureau, American Community Survey, 2013-2017. The population base for these two numbers may not be the same.

**South County**, a region generally defined as that part of Anne Arundel County south of the South River, has a population of just less than 50,000. Much of South County is wealthy, including Davidsonville and communities along the waters of the Bay, and much of it below Edgewater is largely rural. There are several small pockets of poverty in South County that lack access to jobs, health care, transportation, and affordable housing. About 14 percent of its families make less than \$35,000 annually.

Many families in these poor communities suffer from poor health, lack of access to healthy food, and chronic truancy. In Deale and Lothian, the youth unemployment figures are 16 percent and 21 percent, respectively, compared to a 10 percent youth unemployment rate for the county as a whole. Disconnected youth in these areas of South County is a growing concern, as is truancy at Southern High School. The large number of South County heroin overdoses and deaths, relative to population size, also characterize areas surrounding Deale and Lothian.<sup>12</sup>

**Annapolis** has a population of 39,321, of which almost 11 percent live at or below the Federal Poverty level of approximately \$25,000 for a family of four. African Americans and Hispanics constitute almost 25 percent and 20 percent, respectively, of the total population, and represent a higher proportion of those living in poverty.<sup>13</sup> Annual median household income for Annapolis is \$74,187, about \$25,000 lower than that of the county overall.

The City has 790 public housing units for low and moderate-income residents, which is inadequate to meet the demand. The age of public housing ranges from 40 to 70 years old and all of it is in need of repair and/or replacement. The Housing Authority of the City of Annapolis also administers 331 rental vouchers and 53 project-based vouchers. There are six Section 8 complexes within the city limits. The crack cocaine epidemic, mass incarceration, and an ever increasing gap between rich and poor, have helped change the demographics and the culture of public and subsidized housing. The majority (almost 85 percent) of residents are African American females living with their children on an average of \$25,000 per year, equal to or below the poverty threshold.<sup>14</sup> With no transportation and little affordable child care, most families in public housing have become mired in intergenerational poverty.

<sup>12</sup> Anne Arundel County Police Department.

<sup>13</sup> U.S. Census Bureau, American Community Survey, American Fact Finder, 2017.

<sup>14</sup> Housing Authority of the City of Annapolis, 2018.

Transportation

The lack of public transportation continues to be a major issue for the county. Eighty percent of county residents drive to work in their own automobile, alone, every day. Almost eight percent participate in a car pool, two percent walk, and two percent take a bus.<sup>15</sup>

In 2014, the county created an Office of Transportation, which has led to some improvements. There are now five regional transit routes, eight Annapolis routes, four local bus routes and four commuter bus routes. Additionally, there are two pilot bus routes in South County. Nonetheless, public transportation continues to be a major concern for all participants in this needs assessment. There are large areas of the county that are underserved or not served at all, including North and West County. As one provider noted:

“A family I am working with relocated to Severn. She works at a senior living community in Annapolis. It’s a 3-hour commute via MTA, that’s what you have to do for connections. What about transportation in West County? You’re in Sarah’s House but you are from Annapolis and you want to come back to work here. Forget it. You can’t.”

Low income residents who have no car or share a car have major difficulties getting to work, to college, to the hospital, even to the nearest grocery store. Many low income residents do not know how to drive a car and lessons are prohibitively expensive. Even when that hurdle is overcome, the required number of hours needed for driving is a huge barrier, especially for young drivers. Uber and Lyft are fine for populated areas, but very expensive in outlying or rural areas such as South County. Taxis are in the same category. Cheaper transportation, such as instant rentals of electric scooters and bikes, are increasingly regulated which requires a high initial outlay. Insurance, tags, and title are other costs that have to be factored in to owning an automobile.

Affordable Child Care

As of 2017 there were 494 family child care providers, 120 child care centers, 12 Head Start sites and 41 public pre-kindergarten sites in Anne Arundel County.<sup>16</sup> The distribution of child care centers is uneven across the county. There are none located in Brooklyn Park, Harmans or Shadyside, for example.<sup>17</sup>

Table 13

Average Weekly Cost of Full-Time Child Care in Anne Arundel County		
	Family Child Care Programs	Child Care Centers
0-23 months	\$218.55	\$305.53
2-4 years	\$108.64	\$196.09
5 years	\$169.19	\$189.64
School Age Full	\$155.97	\$174.14
School Age B/A	\$102.35	\$107.40

Maryland Family Network, 2018

The cost of child care continues to rise. The average cost of family day care for two children is over \$20,000 per year, and even more in a licensed child care center.<sup>18</sup> The majority of middle and low income families, therefore, still choose family day care, although the numbers of family day care providers are dropping and are predicted to continue to decline until 2022, as seen in Figure 7.

According to early childhood advocates, the issues driving child care costs upward include the high costs associated with licensed day care as licensing standards increase, and the difficulty in finding qualified employees who will work for the relatively low wages paid by day care providers. The wages for teachers and aides are well below the living wage levels for a single adult with no children, seen in Table 14.

<sup>18</sup> Ibid.

Housing

As of September 2018, the median home sale price in Anne Arundel County was roughly \$345,000, an increase of 10 percent, or \$30,000, compared to the previous year. The number of houses sold declined 9 percent during the same period to 8,619, with realtors ascribing the decline to low inventory and an increase in mortgage rates.

Renters account for 26.4 percent or 52,948 of the 203,336 households in the county. The median gross rent paid by Anne Arundel County renters in 2017 was \$1,579 monthly, or almost \$19,000 annually. Forty-five percent of all renters – 24,172 – are “overburdened,” in that they pay more than 30 percent of their gross income in rent. In Anne Arundel County, a household making less than \$4,990 a month – about \$60,000 annually – would be considered overburdened when renting an apartment at or above the median rent.<sup>19</sup>

According to the 2016-2020 Consolidated Plan for Anne Arundel County, 66 percent of extremely low income renters and 72 percent (4,645 homeowners) of extremely low income homeowners are paying more than 50 percent of their income for housing. If an emergency, such as sudden unemployment, seasonal lay-off, unexpected medical event, or other difficulties occur, these households risk losing their homes and becoming homeless. Single parent families, the elderly, and those with disabilities who are dependent on one paycheck or on a fixed income are also at risk of homelessness.

There is a decreasing amount of public and subsidized housing in the county. There were 10,278 county families on the waiting list for Housing Choice vouchers as of 2017. There were 17,683 families on the waiting list for public housing in the county in 2018<sup>20</sup> and 1,514 families on the Annapolis public housing list.<sup>21</sup> Eighty-eight percent of the families on the county waiting list included children, five percent represented families with disabilities, three percent were elderly families and the remaining four percent were undesignated. White families constituted 14 percent of the total waiting list, African American families 29 percent, Asian families 0.7 percent and unassigned, 55.9 percent (Table 15).

Homelessness

Homelessness remains a serious socio-economic problem in Anne Arundel County as seen in Table 16. The county served 1,684 homeless individuals in 2017, an increase of 13 percent since 2015. The family homelessness count is only of those families who were served in a shelter program. Many families are doubled up or living in their cars. Anecdotal estimates suggest family homelessness is far higher in the county than shown in the table due to the lack of affordable housing. There are still only three homeless shelters in the county, and three rehousing programs.

Of the 308 homeless people in need of housing services who attended the 2018 Anne Arundel County Homeless Resource Day, only 34 percent were in a shelter or receiving some kind of resident services (Table 17).

Table 15

Anne Arundel County Housing Choice Voucher Waiting List, by Income Level, 2018			
	# of Families	% of total families	Average Days Waiting
Waiting list total	10,278		966
Extremely low income (<=30% but <=50% AMI)	7,414	72.1%	
Very low income (>50% but 80% AMI)	1,836	17.9%	
Low income (>50% but 80% AMI)	746	7.3%

Summary:

Anne Arundel County offers great economic opportunity for the majority of its residents. However, the high cost of living and especially the housing market, creates difficulties for middle class and low-income residents. Wages for public employees – teachers, police officers, and other local government employees – have increased slowly or remained stagnant since the Great Recession, which has made it even more difficult to afford living and working in the county. Too many low income residents are now paying well over 30 percent of their income for rent. Those who work in the lower paid service industries often choose to live in other counties or Baltimore City.

Needs and Gaps

- For those county residents who don’t have their own car, or share a car, transportation is a major barrier to self-sufficiency. The major institutions: the community college, county government, the school system, the workforce development agency, and the private sector need to cooperate to develop transportation hubs to their services.
- Quality, affordable child care continues to be a huge barrier to the pursuit of economic opportunity for many residents, particularly those in neighborhoods without any affordable child care services and for single parents.
- Job training and apprenticeships are not accessible to low income residents in the locations they are currently offered.
- The lack of affordable housing continues to be problematic, not just for low income residents but also for middle income professionals.

<sup>19</sup> Towncharts.com, United States Demographics Data, 2016.  
<sup>20</sup> Anne Arundel County Housing Commission, 2018.  
<sup>21</sup> Housing Authority of the City of Annapolis, 2018.

There are approximately 127,512 children under the age of 18 living in Anne Arundel County; a 0.6 percent increase since 2015. Of those, 27.4 percent (35,002) are under five years of age, and 10 percent (over 12,000) live below the federal poverty level; an increase of two percent since 2015.<sup>1</sup>

School Readiness

The first five years of a child’s life can be the most prophetic in terms of future success and achievement. The brain develops more quickly during the early years than at any other time in life. Babies and young children grow, learn and develop when they receive love and affection, encouragement and stimulation, as well as nutritious meals and good health care.<sup>2</sup>

The level of income within a community is a statistically significant predictor of differences in kindergarten readiness.<sup>3</sup> Numerous studies have documented that low income children as young as age two perform worse across cognitive measures. Further, the number of Adverse Childhood Experiences (ACES) a child has experienced can also decrease readiness. ACES have been associated with risky health behaviors, chronic health conditions, low life potential, and early death.<sup>4</sup> ACES may also cause inability to process verbal and nonverbal or written information, inability to effectively use language to relate to others, lack of sequential organization, and inability to distinguish emotions, all essential skills in the kindergarten classroom.<sup>5</sup> As one participant noted:

“...you don’t know colors, and you don’t know letters, and you have a 100 word vocabulary and your peers are coming in with a 3,000 -10,000 word vocabulary. That’s a huge gap that puts you at a disadvantage.”

In 2015, a new kindergarten readiness tool was introduced to Anne Arundel County Public Schools: Ready4Kindergarten or R4K. While scores have improved from a low of 43 percent in 2015 (Figure 8), the 2018 score still shows less than half of county children are ready for kindergarten.

Figure 8

Anne Arundel County Public Schools, 2018

When the data is disaggregated by disability status, race/ethnicity, English proficiency, and low income, the scores are much lower and the achievement gap is clearly visible.

Figure 9

Anne Arundel County Public Schools, 2018

Mental Health and Behavioral Issues in Early Childhood

Increased mental health and behavioral issues in the early childhood population are causing widespread concern in every system. Behavioral problems in children as young as two years old are disrupting child care facilities including Early Head Start and Head Start. They are causing consternation for parents, and increasing stress for preschool and kindergarten teachers. Hospital personnel described young children in the emergency department as “totally out-of-control” and physically assaulting staff who try to calm them. Parents are described as “exhausted and desperate - looking for a place they can keep their child safe.” As one provider commented:

“The shift is more and more towards younger children. It used to be that when five, six, and seven year olds came in we thought they just needed better parenting. We don’t say that anymore because a lot of these kids are really sick. About 50 percent of them need to be hospitalized.”

Professionals are divided as to the cause of this increase, but they all agree that this is a new phenomenon unrelated to income. Many suggested the use of social media by parents and young children is leading to huge deficits in social and emotional skills. It is no longer surprising to see young children “biting, scratching,” and even “throwing chairs” in kindergarten classrooms. Children as young as two are being diagnosed with Attention Deficit Disorder and medicated accordingly.

<sup>1</sup> U.S. Census Bureau, *American Community Survey*, 2017 Estimates

<sup>4</sup> Centers for Disease Control and Prevention, *Violence Prevention - Adverse Childhood Experiences*, 2018.  
<sup>5</sup> Hertel, R. and Fretzo, L. *Compassionate Schools*, 2011.

Some serious mental health issues are surfacing earlier, often co-occurring with developmental issues such as autism. As one professional commented “we’ve seen some kids with psychotic issues at a very young age.” According to the Anne Arundel County Mental Health Agency (2018) the birth to age five population is showing another large increase in use of mental health services, a rise of 11.4 percent in one year. Yet there is a huge lack of resources inside the public school system and within the community for this age group. According to participants from hospitals and schools, suicidal ideation and “cutting” behaviors are becoming more and more common at the elementary school level. Pediatricians are attempting to manage the crisis, usually with medications. Many professionals commented that for the age 0-5 population, parents are the most important piece of the picture. As one noted:

“If you took the child out of the environment would we still see the behavior? It is not just the traditional intergenerational poverty environments, it is truly parents. Even if you have an environment that feels or looks okay, you may have a parent who is not skilled. We obviously have more vulnerable families who have issues with opioids. Kids may be acting out, but when you see the parenting up close ...”

The K-12 years

The Anne Arundel County Public School System consists of 111 schools: 80 elementary, 19 middle, and 12 high schools. These numbers have not changed since 2014 despite continuing growth in the number of students. The total enrollment rose from 79,720 in 2015, to 83,307 in 2018 (Table 18). In 2018, ground was broken on the \$124.5 million Crofton High School that will serve 1,700 students.

Table 18

Enrollment Data for Anne Arundel County Public Schools (2015 – 2018) Anne Arundel County Public Schools Overview					
Type of School	# of Schools in County	Total Number of Students Enrolled			
		September 2015	September 2016	September 2017	September 2018
Elementary School (Grades PreK-5)	80	39,947	40,649	41,323	45,284
Middle School (Grades 6-8)	19	17,620	17,747	18,089	16,977

Totals	111	79,720	80,766	82,127	83,307

Anne Arundel County Public Schools, 2018

The Hispanic Population

There are 11,147 Hispanic students in the Anne Arundel County Public School System, over 14 percent of the student body. The students hail from several Spanish speaking countries, although currently the majority are from El Salvador. Some elementary schools now have a majority (or over 50 percent) Hispanic students. Many are English Language Learners, some were forced to flee their own countries due to violence, and a very small percentage are illiterate in their own language. School system officials expect this demographic to grow and are responding as quickly as possible to the growing need for English for Speakers of Other Languages (ESOL) teachers, but there is a shortage within the county. Those available are itinerant (move from school to school) in order to serve as many students as possible, which often means they serve each student only once per week. Parents are increasingly difficult to engage because they are afraid. As one focus group participant noted:

“They are becoming more and more afraid to call for anything or ask for anything. It’s been a lot more difficult to persuade them, and say ‘no really this isn’t going to hurt your immigration status.’”

Academic Achievement

Maryland now uses the Maryland Comprehensive Assessment Program (MCAP) as the umbrella for all standardized state testing. Anne Arundel County uses the Partnership for Assessment of Readiness for College and Careers (PARCC) as the test to assess Language Arts and Math. In the 2018 Maryland school district rankings, Anne Arundel County ranked 13 of 24 school districts based on the most recent test scores. As illustrated in Tables 19 and 20, over 85 percent of Anne Arundel County 8th graders are not meeting standards in math, and less than half are meeting standards in reading. The constantly changing scoring mechanisms at the state level makes interpreting the scores more difficult.

Table 19

Free and Reduced Meals (FARMS) Students

Eight of ten children from low income households receive FARMS, which is a measure of household poverty. The Anne Arundel County Public School System has a reasonably low rate of FARMS students overall: 37 percent at the elementary school level; 31.8 percent in middle schools and 37 percent at the high school level. However, when we compare two school feeders, one in a relatively high income area and one in a low income area, the differences in rates are dramatic. The range is from 76.86 percent at Park Elementary in Brooklyn Park, to 1.53 percent at Shipley’s Choice Elementary in Severna Park (Tables 21 and 22).

Table 21

North County High School Feeder System, Free and Reduced Meals (2018)

Anne Arundel County Public Schools, 2018

Achievement Gap

Nationally standardized (NAEP) Reading and Math testing data from 2007 to 2017 illustrates a downward trend in 8th grade Math and Reading achievement for the 2017 school year (Tables 23 and 24). The achievement gap related to race, ethnicity and low income children (as measured by FARMS) is clearly visible.

Table 23

Truancy

Students are considered habitually or chronically truant if they are absent for 20 or more days during the school year. Research shows that students who miss more than 20 days of school in preschool, kindergarten, and first grade are much less likely to read at grade level by the third grade. Students who cannot read at grade level by the end of third grade are four times more likely than proficient readers to drop out of high school. The likelihood of chronic absenteeism increases as students progress into high school and often leads to poor outcomes later in life, from poverty and diminished health, to involvement in the criminal justice system.<sup>6</sup> According to the 2018 Maryland Report Card, the county’s chronic truancy or habitual absenteeism rate has risen across all grade levels and student populations. This should be of great concern at the elementary level (Figure 11). Children from low income families who receive free lunch (FARMS) have the highest levels of chronic truancy, an increase of three percent since 2014. Hispanic children have the least chronic absences of all students.

Figure 10

Maryland Report Card, 2018

<sup>6</sup> U.S. Department of Education, *Chronic Absenteeism in the Nation's Schools*, 2016.

According to participants in this needs assessment, by ninth grade many vulnerable and struggling students have effectively already dropped out of school, although they may turn up every so often and “roam the halls.” Figure 11 shows a steady increase in chronic absenteeism over three years for all student populations; the highest being an over three percent increase for FARMS students.

Figure 11

Maryland Report Card, 2018

Graduation Rates

The on-time graduation rate is the number of students graduating divided by the number of students entering ninth grade four years earlier. High school graduation rates are one of the measures of the overall effectiveness of our school system. Among the school districts in the state of Maryland, high school graduation rates range from 74.84 percent in the Baltimore City district, to 95 percent in Queen Anne’s, Calvert, and Carroll counties. Anne Arundel County’s overall graduation rate has risen just shy of five points from 85.6 percent in 2010 to 90.5 percent in 2016, a rate approximately 3 percent higher than the state of Maryland at 87.67 percent. Nine of the county’s 12 high schools have graduation rates of 90 percent and higher, led by Severna Park High School (over 95 percent). There are still gaps in achievement related to race and income, (Figure 12) but these gaps do slowly appear to be shrinking. Between 2010 and 2016, African American students have shown an 8.56 percent improvement, and FARMS students have shown 7.96 percent improvement in graduation rates.

Figure 12

Maryland Report Card, 2018

Mental Health and Older Youth

The Anne Arundel County Department of Health provides school health services to all public school students through school nurses. The nurses work with school system guidance counselors to address students’ physical and mental health issues as they are identified and to coordinate interventions as needed. The number of crisis interventions in the public school system for social and emotional issues has doubled since the 2012 - 2013 school year (Figure 13).

Figure 13

Anne Arundel County Department of Health, 2018

As of 2016, the Anne Arundel County youth suicide rate was 7.8 per 100,000, an increase from the rate of 5.3 per 100,000 in 2012. The American Foundation for Suicide Prevention estimates that for each youth suicide, there are 25 suicide attempts.<sup>7</sup> Between 2012 and 2016, there were 1,306 Emergency Department encounters in Maryland hospitals for suicide attempts by Anne Arundel County youth aged 10 to 24 years, an average of 261 per year. Similar to the completed suicides among this age group, there were more Emergency Department encounters for suicide attempts between 2012-2016 (compared to the previous report for 2008-2012) costing Emergency Departments an estimated \$1.1 million. According to the 2016 High School Youth Risk Behavior Survey, the percentage of Anne Arundel County high school students who felt sad or hopeless almost every day for 2 weeks in a row so that they stopped doing some usual activities increased significantly between 2014 and 2016.

The number of emergency evaluations by county police for juvenile suicidal or out of control behavior has been steadily rising since 2012 (Table 14). County police performed over 1,800 emergency evaluations for juveniles (ages 17 years and under) for suicidal or out of control behavior from 2012 through 2016. Two thirds of the juveniles were White, 29 percent were Black (Table15).

Figure 14

Anne Arundel County Police Department, 2016

Figure 15

Anne Arundel County Police Department, 2016

<sup>7</sup> American Foundation for Suicide Prevention, *Suicide Statistics*, 2017

Participants in this needs assessment emphasized the growing mental health issues for youth throughout the school system. Cutting behaviors, depression and anxiety are increasing. Since 2016, there has been an over ten percent rise in mental health services for youth ages 6-12 years, and an 8.1 percent rise for youth ages 12-17. Educators stressed that trauma, poverty and substance abuse at home impact many children. As one noted:

“We have kids that are totally out of control. It’s coming from a multitude of factors, and lack of parenting is a huge piece of it. The worst cases we have managed include parents who were on pills, experiencing homelessness or about to be evicted.”

Hungry Children

In several research studies, childhood hunger has been associated with significantly poorer cognitive functioning, decreased school attendance, and diminished academic achievement. Many participants in this needs assessment from school personnel to the faith community, noted that they are seeing more hungry children who are unprepared for the school day than ever before. As one school administrator noted:

“They haven’t eaten at home, they barely have a sofa to sleep on, and there are things happening at home so they are not getting a good night’s sleep. Therefore, when they come to school and their homework isn’t done, as a teacher, that’s really the least of your worries. We worry about what’s happening at home and how can we help?”

While there are volunteer backpack programs that send children home from school with a weekend supply of food, and/or church food pantries and SNAP (food stamps) programs for those eligible, there are many gaps, particularly for those children living with grandparents, relatives, and friends. The free breakfast and lunch program within the public school system has seen a persistent increase in the number of children registering for and receiving free breakfast and lunch. The number of children receiving free breakfast has risen almost 21 percent in four years. An added concern is that school breakfasts are served only 181 days of the year, just over half of the potential days for a child to eat breakfast. The number of free lunches served daily to students has increased from 14,351 in 2014 to 15,216 in 2018, a seven percent increase.<sup>8</sup>

<sup>8</sup> Anne Arundel County Public Schools, 2018.

Youth Gang Violence

For some youth in Anne Arundel County, informal gangs (neighborhood crews) or legitimate, international gangs such as Mara Salvatrucha (MS-13) provide the consistency, safety, and security usually provided by the family. The sense of belonging and purpose has been described, eloquently, by gang members. The Annapolis Collaborative for Change, a cross sector partnership on gun and gang violence, has inventoried at least ten identifiable neighborhood crews in Annapolis alone, and four sects of MS-13 across the county. Neighborhood crews appear to have developed from the rivalries or neighborhood ‘beefs’ in low income and public housing communities. Thirty years ago these natural turf wars, waged fiercely on a sunny Saturday afternoon, were most often settled with a cross-community get together or cook-out on the same evening. As one ex-resident of a public housing complex noted:

“The neighborhood was like a family – everyone looked after everyone’s kids. I grew up with a single parent who warned against ever having a cop knocking on the door. We were all raised as brothers and sisters. Even the drunk on the corner would threaten to tell your Mom if you were up to no good.”

Young people get involved in gangs to belong. They sell drugs to be perceived as successful and entrepreneurial, to buy tennis shoes, and sometimes to buy food or pay rent for the family. It is a local cottage industry described by a community member as “a pyramid scheme and no-one wants to stop the flow.” Arguments over drug territory and sales have become entangled with the old neighborhood rivalries. As another resident noted, “There are territories. They are controlling territories so they can do drug transactions.”

MS-13 (an international criminal gang that originated in Los Angeles, California, in the 1980s) has an organized presence in the county. Members are searching for young recruits. According to one Hispanic resident:

“They are active in schools in Annapolis, Arnold, and Glen Burnie. Some elementary school children are very familiar with MS-13. They are second generation – their parents are gang members. Children as young as 13 in Annapolis have been invited in. No one wants to ‘snitch.’”

Since the Needs Assessment, Poverty Amidst Plenty V: Striving to Achieve Progress For All (2015), youth violence has increased in the public school system, both in amount and intensity. While the incidents of fatal youth gun violence have declined in the county, anxiety related to gun violence was expressed by several participants. The concern about the possibility of a gun related incident in one of the local schools was expressed by some. As one professional noted:

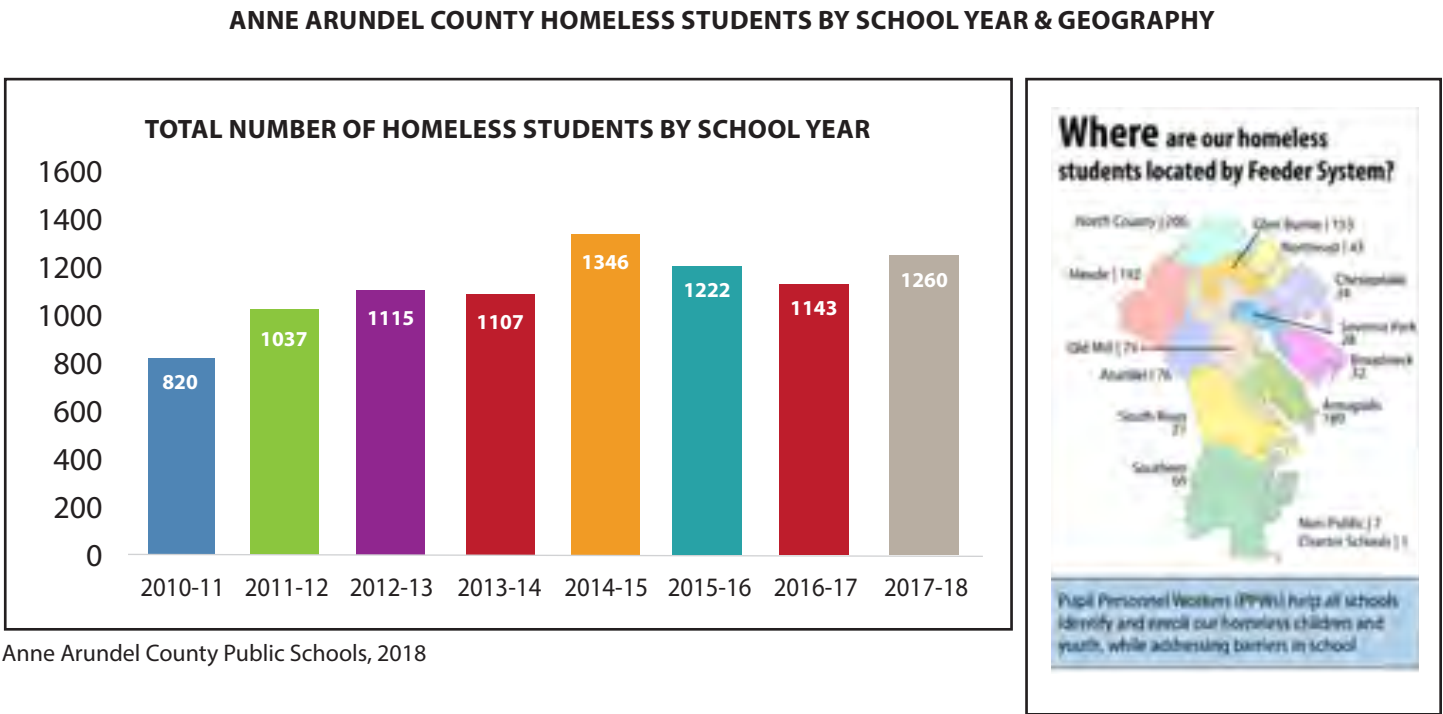

“What they are being disciplined for is qualitatively different ... fights were fights, and now fights involve weapons. Aggression was aggression, but now the aggression is more dangerous, more volatile, having more serious repercussions in terms of injuries and the like.”

As of June 2018, there were 1,260 homeless youth identified in the county public school system (Figure 16). North County schools accounted for 337 of the homeless children, triple the amount for 2016. The county Youth Reach Survey for 2018 documented 137 unaccompanied, homeless youth. A disproportionate number of unaccompanied homeless youth live in North County; 18 percent are living outside or in an abandoned building, over 33 percent have spent time in adult jail or juvenile detention facilities, and only 10 percent of older youth (age 16 to 24) have a full-time job (down from 17 percent in 2017).

Figures 16 and 17

Anne Arundel County Public Schools, 2018

There are an estimated 6,702 disconnected youth in the county, a small drop from the 2017 figure of 7,000.<sup>9</sup> Disconnected youth are young people aged 16 to 24 who have dropped out of school, are not in college, and are without employment or any sort of career path. These youth are disproportionately found in North County, but a South County needs assessment (completed in 2017) showed unemployment and disconnection among South County youth is a growing concern. In fact, many youth are leaving South County to find employment, which is contributing to the majority aging population in the area.

When youth employment figures for county youth aged 17-24 are disaggregated, the African American rate of unemployment is 25 percent as opposed to an overall rate of 13.2 percent (Table 25).

<sup>9</sup> Opportunity Nation, *Opportunity Index*, 2018.

According to the Opportunity Nation website, the lost revenue and social service investments for disconnected youth are estimated to cost taxpayers \$93 billion a year and \$1.6 trillion over their lifetimes.<sup>10</sup>

<sup>10</sup> Opportunity Nation, *Disconnected Youth*, 2018.

Sports, Recreation and the Arts

The county public school system offers arts programming through its magnet programs in the Performing and Visual Arts (PVA). PVA is available at Wiley H. Bates and Brooklyn Park Middle Schools, and Annapolis and Broadneck High Schools. Maryland Hall for the Creative Arts, the Chesapeake Arts Center, the Annapolis Children’s Museum and several non-profit organizations offer after school and summer arts programs. However, for low income students, the lack of any transportation out of their neighborhood makes participation difficult.

Many participants in this needs assessment lamented the lack of sports and recreation opportunities for children and youth across the county, especially the removal of middle school sports from the curriculum in public schools. Participation in a school sports team is tied to academic achievement. When students have failing grades they cannot participate in sports. While this is supposed to act as an incentive to improve grades, according to participants it most often acts as a disincentive to attend school.

Parents from every race, ethnicity and income level decried the lack of “active things to do” for children and youth. While some communities have a recreation center for youth, many do not. One parent and county resident recalled the importance of inter-neighborhood sports during his childhood:

“When I was young we had our own community sports and associations and we played against the other communities. So there was great investment within those communities for young people; we played against Pumphrey, and Pumphrey played against Freetown, Freetown played against Magothy. Now we have the recreation leagues that are pulling youth out of their communities - it’s not community driven.”

School personnel also noted the importance of sports and the need for more recreation centers in low income neighborhoods where youth struggle with transportation needs as well as the negative outcomes associated with poverty. As one noted:

“We need rec-centers. Only the families who can afford to sign up their kids for sports can engage in them. I tell everyone I’m a product of community center, rec-center, I went to summer camp there, I went to Head Start there. It was the catch-all.”

Career and Work Opportunities

There are three institutions of higher education within county boundaries. Anne Arundel Community College is a two-year institution with three campuses, and had an enrollment of 18,734 full-time credit students in fall of 2018. St. John’s College, a four-year liberal arts college in Annapolis had an enrollment of 513 in the same year. The county is also home to the United States Naval Academy, a four year institution with an enrollment of 4,495 in fall of 2018.

Several participants in this needs assessment commented on the lack of apprenticeship and career opportunities for those students who are not college bound. School system officials recognize that for some students who may successfully graduate, there is no formal path forward. As one school official asked:

“What can we be doing, the community college and others in the county, for those students that aren’t going off to college and are really seeking some marketable career skills as they leave us in the K-12 system and go into the workforce?”

Anne Arundel Community College recently announced plans to expand its skilled trades program by 2021. The college plans to construct a new Center for Innovation and Skilled Trades on its Arnold campus. The center will initially offer certification for forklift operation and general contracting with plans to expand to training in plumbing, electrical, HVAC and welding.<sup>11</sup>

Summary

The successful development of youth in our county begins during early childhood. The birth to five year period may be the most important in terms of future social, emotional and academic development. It is in these years that gaps in achievement related to income, race, ethnicity and special needs begin. Participants commented overwhelmingly on the rapid increase in behavioral and mental health issues for this age group, a problem that county leaders must struggle with. Mental health and substance abuse issues for older youth should also be made a priority. There should be increased collaboration between the public school system, community college and workforce development to ensure that our youth have work options.

Needs and Gaps in Services

- The need for behavioral supports for young children continues to grow. The public school system needs additional community support as it grapples with this problem.
- Anxiety and depression, including increased suicidal ideation among public school students, requires a huge increase in mental and emotional health services inside and outside of the school system.
- Mentoring programs continue to be high on everyone’s list of needs, especially for financial literacy and soft skills, but also for adults who can act as role models and support for youth who have little parental supervision and those who are unaccompanied. **There has been almost no increase in mentoring programs since this gap was highlighted in the 2015 needs assessment.**
- Youth recreation and support centers within low income communities are desperately needed. The lack of transportation for low income parents and their children makes this need even greater.
- Participants from every income level commented that we need **“something for our kids to do after school, a place to be.”**
- While the public school system does an excellent job feeding children, there are gaps on weekends and during semester breaks. This need is greatest in North and South counties.
- The lack of consistent career education in the school system has not changed since 2015.
- The need for coordinated employment services for those youth who are not college bound is growing as the job market grows.
- Many parents, at every income level, are struggling with raising children. While some are single, low income parents, all parents who took part in this needs assessment were battling the impact of social media. The lack of parenting programs in the county continues to be a significant area of need.

<sup>11</sup> Lauren Lumpkin, *AACC receives \$1M gift to fund skilled trades program*, The Capital, January 29, 2019.

Health

In 2017, there were 4,461 deaths in Anne Arundel County, and life expectancy was 79.6 years. Cardiovascular disease was the leading cause of death in the county, followed by cancer. Accidental deaths (unintentional injury) were the fifth leading cause of death, primarily driven by increases in opioid overdose deaths. That number has risen almost 10 percent since 2013 (Figure 18).

Figure 18

Maryland Department of Health, Vital Statistics Administration, 2018

Age-adjusted death rates for coronary heart disease decreased for Blacks and Whites between 2013 and 2016. While Blacks still have the highest death rates in the county per 100,000 residents, that number decreased by 18 percent in just three years. The decrease for Whites was only 8 percent (Figure 19).

Figure 19

Centers for Disease Control and Prevention, 2016

Births

Many factors affect pregnancy and childbirth including the mother's pre-pregnancy health status, the mother's age at birth, access to health care and socioeconomic status.<sup>1</sup> In 2017, there were 6,985 births in Anne Arundel County. Of those births, 4,242 were non-Hispanic White, 1,273 were non-Hispanic Black and 936 were Hispanic (Table 26).

Table 26

Anne Arundel County Births by Race and Ethnicity (2013-2017)					
	2013	2014	2015	2016	2017
Total	6,814	6,968	6,924	6,994	6,985
NH*White	4,399	4,483	4,383	4,357	4,242
NH Black	1,204	1,236	1,259	1,291	1,273
Hispanic	827	866	847	896	936

Maryland Department of Health, Vital Statistics Administration, 2013-2017 Annual Reports.

Adequate prenatal care access is a concerning issue in the county. The Hispanic population is showing the greatest increase in births, approximately 15 percent, yet there is low utilization of available OB-GYN services. The county Health Department reports since 2012, there has been an overall decrease in pregnant women seeking prenatal care during their first trimester. In 2016, less than half of Hispanic mothers received prenatal care during their first trimester of pregnancy and 10.5 percent of Hispanic mothers received late or no prenatal care.<sup>2</sup>

The teen birth rate has dropped for all races/ethnicities since 2013, although the Hispanic rate has shown an uptick since 2013. The Black teen birth rate has dropped by almost half since 2012 (Figure 20).

Figure 20

<sup>1</sup> Anne Arundel County Department of Health, 2018.

<sup>2</sup> Ibid.

Infant Mortality

Infant mortality measures deaths during the first year of life. In 2017, there were 28 infant deaths in Anne Arundel County, with an overall infant mortality rate of 4.1 per 1,000 live births, lower than the state and the nation. A significant disparity continues to exist between white and black infant mortality. In 2017, non-Hispanic black infants in Anne Arundel County had a mortality rate of 7.9 per 1,000 live births, significantly higher than for non-Hispanic white infants. The same disparity is seen at the state and national levels (Table 27).

Table 27

Infant Mortality Rate Comparison, 2013- 2017					
	2013	2014	2015	2016	2017
Infant Mortality- All Races per 1,000 Live Births

Low Birthweight

Low birthweight is a term used to describe babies who are born weighing less than 2,500 grams (five and a half pounds). In contrast, the average newborn weighs about 8 pounds. Risk factors for low birthweight include using street drugs and abusing prescription drugs, exposure to air pollution or lead, low socioeconomic status and domestic violence.<sup>3</sup> Low birthweight infants run the risk of developing health issues, hyperactivity disorders and developmental issues, especially those developmental issues related to school achievement. In Anne Arundel County, the percentage of low birthweight babies is dropping slowly and is less than the state average at 7.4 percent (Table 28).

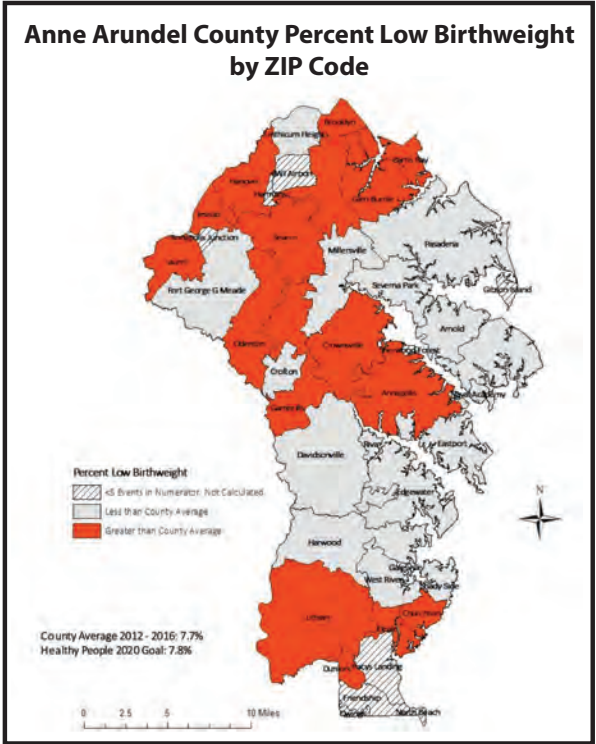

Table 28

Percentage of Babies Born of Low Birthweight, 2014 & 2016			
Percentage of Low Birthweight (<2500 g) Babies	Anne Arundel	Maryland	United States
2014	7.5%	8.5%	8.0%
2016	7.4%	8.6%	8.2%

Anne Arundel County Department of Health, 2018

There are several ZIP Codes concentrated in the northern part of the county where the percentage of low birthweight infants is much higher than 7.5 percent (Figure 21).

Figure 21

Anne Arundel County Department of Health, 2018

<sup>3</sup> March of Dimes, *Low Birthweight*, 2018.

Health Care Access

The Affordable Care Act (ACA) continues to increase county residents’ access to health care. Under the ACA, persons whose income is up to 138 percent of the poverty level are eligible for Medicaid. Persons whose income is above 138 percent but below 400 percent of the poverty level have the option to purchase health insurance through the Maryland Health Connection (the state’s insurance marketplace/exchange). However, access issues remain. As one respondent commented:

“People believe they have access to healthcare via Medicaid but there are many providers who do not accept Medicaid; that’s a real barrier to access. Also, many people who have high-deductible health insurance plans can’t afford the deductible.”

A small percentage of county residents such as undocumented persons, those not enrolled in Medicaid despite being eligible, and persons opting to pay the annual penalty instead of purchasing insurance, still remain uninsured. However, the percentage of uninsured residents in Anne Arundel County continued to decline in 2018, reaching a low of six percent of residents.<sup>4</sup>

The number of Medicaid enrollments increased ten percent, from 84,616 in 2014 to 93,425 in May 2018 (Table 29). Access to specialist care is limited for the Medicaid and uninsured populations. While primary care may be accessible through community health clinics, finding specialists who will take referrals without private insurance is difficult. As one provider noted:

“We can use preventive primary care – there’s no problem with that, but if someone needs cardiology or oncology and they are uninsured, not all specialists will see them or do payment plans – that’s an access to care issue.”

Table 29

Medicaid Enrollment by Age, Sex and Race/Ethnicity, Anne Arundel County (May 2018)		
		Medicaid Enrollment 2014
		Medicaid Enrollment 2018
Total Enrollment		84,616

	Black, NH	25,193
	Hispanic, Any Race	6,349
	Asian	3,829

Maryland Department of Health, 2018

<sup>4</sup> Anne Arundel County Department of Health, 2018.

Access to Outpatient Care

Access to outpatient care is a continuing problem in the county. Having a primary care provider reduces non-financial barriers to obtaining care, facilitates access to services, and increases the frequency of contacts with health care providers. Without a primary care provider, people have more difficulty obtaining prescriptions and attending necessary appointments. According to county health rankings, the patient to primary care physician ratio in Anne Arundel is lower than the state of Maryland average and that of the U.S. top performing counties which are among the 90th percentile in ranking. The actual number of primary care physicians in the county has increased by only five since 2014 (Table 30).

According to one provider:

“The percentage of primary care doctors is still low and that’s a problem. Primary care doctors do have large caseloads and that is hard on folks. We need to make primary care more attractive to medical schools.”

Similarly, the patient to dentist and mental health provider ratios in Anne Arundel County are worse than in Maryland and the U.S. top performing counties.

Table 30

Primary Care Physicians, Dentists and Mental Health Providers Anne Arundel County (2018)				
	Anne Arundel County Total	Anne Arundel County Ratio	Maryland Ratio	Top U.S. Counties (90th percentile)
Primary Care Physicians (2018)	386	1,450:1	1,140:1	1,030:1
Dentists (2018)	378	1,480:1	1,320:1	1,280:1
Mental health providers (2018)	861	650:1	460:1	330:1

Anne Arundel County Department of Health, 2018

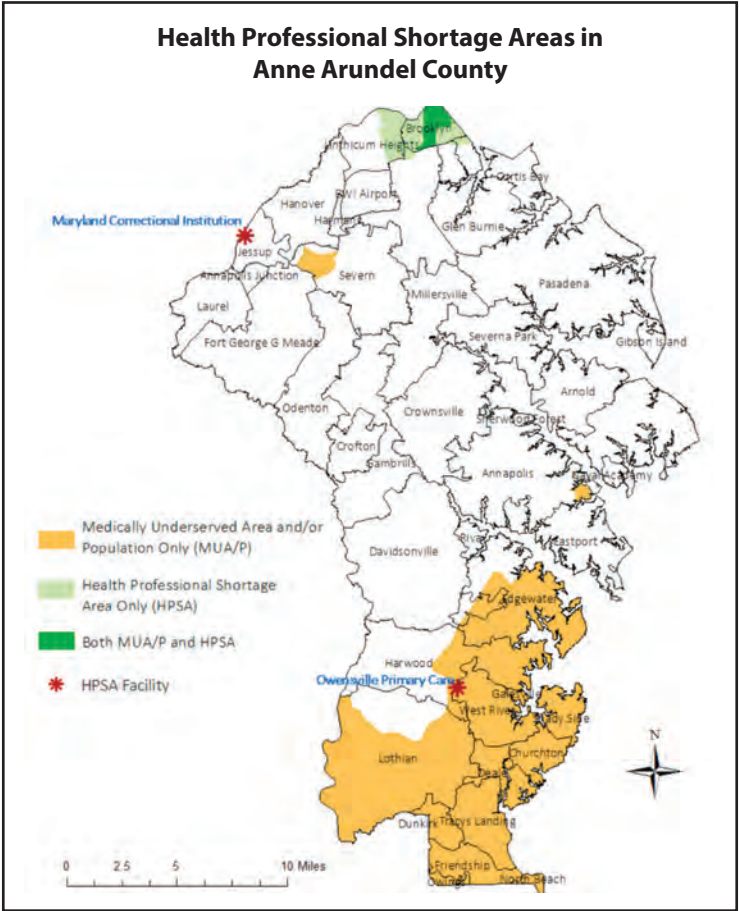

Heath Professional Shortage Areas

Health Professional Shortage Areas (HPSAs) are designated by the federal Health Resources and Services Administration (HRSA) as having shortages of primary medical care, dental or mental health providers and may be geographic or facility-based. In Anne Arundel County there is currently one designated Primary Care HPSA facility (Owensville Primary Care), One Dental HPSA facility (Owensville Primary Care) and two Mental Health HPSA facilities (Owensville Primary Care and Maryland Correctional Institution, Jessup).

Medically Underserved Areas

Medically Underserved Areas (MUA) are designated based on four variables: ratio of primary medical care physicians per 1,000 population, infant mortality rate, percentage of the population with incomes below the poverty level, and percentage of the population age 65 or over. There are 11 census tracts in Anne Arundel County that are designated as medically underserved areas or populations. Approximately 54,700 (10 percent) of the county’s population lives in these 11 census tracts. Brooklyn Park in North County is both an HPSA and an MUA (Figure 22).

Figure 22

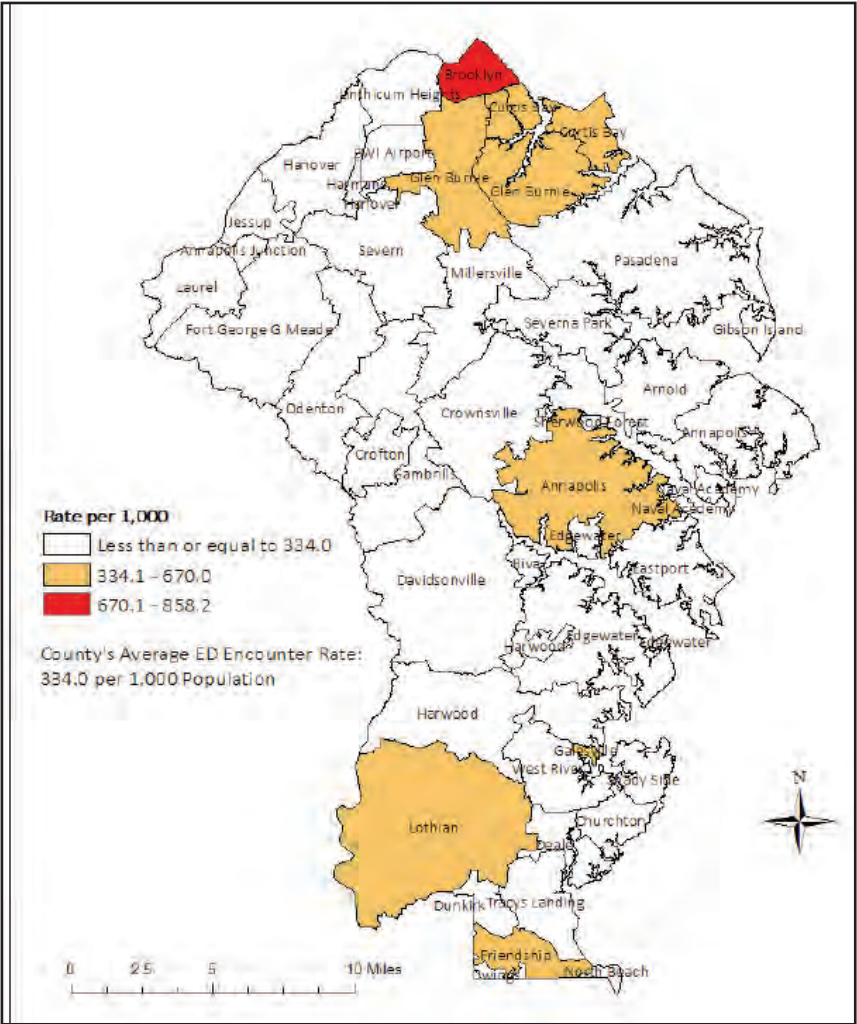

Anne Arundel County Department of Health, 2018

In 2017, 9.6 percent of Emergency Department visits were by uninsured residents. Although not all visits to the Emergency Department are avoidable, care in lower level settings for some conditions, such as diabetes and hypertension, can potentially reduce the number of visits, thereby reducing costs and increasing the quality of care.<sup>5</sup> The rate of Emergency Department visits increases for those residents living in Medically Underserved and Health Professional Shortage Areas (Figure 23).

Figure 23

Emergency Department Encounters per 1,000 Population by ZIP Code, Anne Arundel County, 2017

Anne Arundel County Department of Health, 2018

<sup>5</sup> Anne Arundel County Department of Health, 2018.

Hospital Admissions

In 2017 there were 59,277 hospital stays in Anne Arundel County, a rate of 104.3 stays per thousand (Table 31). The hospitalization rate increased with age from 68.7 hospitalizations per 1,000 population among 0–18 year olds, to 262.5 hospitalizations per 1,000 population among those age 65 years and over. (Note: This data only includes Anne Arundel County residents admitted to hospitals in Maryland.)

Table 31

Inpatient Hospitalizations in Anne Arundel County (2017)		
	Number	Rate per 1,000
Total Hospitalizations	59,277	104.3
Age		
0 to 18 Years	9,763	68.7
19 to 39 Years	12,917	83.3
40 to 64 Years	16,607	84.9
65 Years and Over	19,990	262.5
Sex		
Male	25,656	92.7

Asian, NH	1,271	62.1
Hispanic (Any Race)	3,368	84.7

Anne Arundel County Department of Health, 2018

ZIP codes are another way to track hospitalizations. The ZIP Code containing Brooklyn Park has the highest rate of hospitalization at 163.9 per 1,000 residents. The Glen Burnie rates are also notable when population density is considered (Table 32).

Table 32

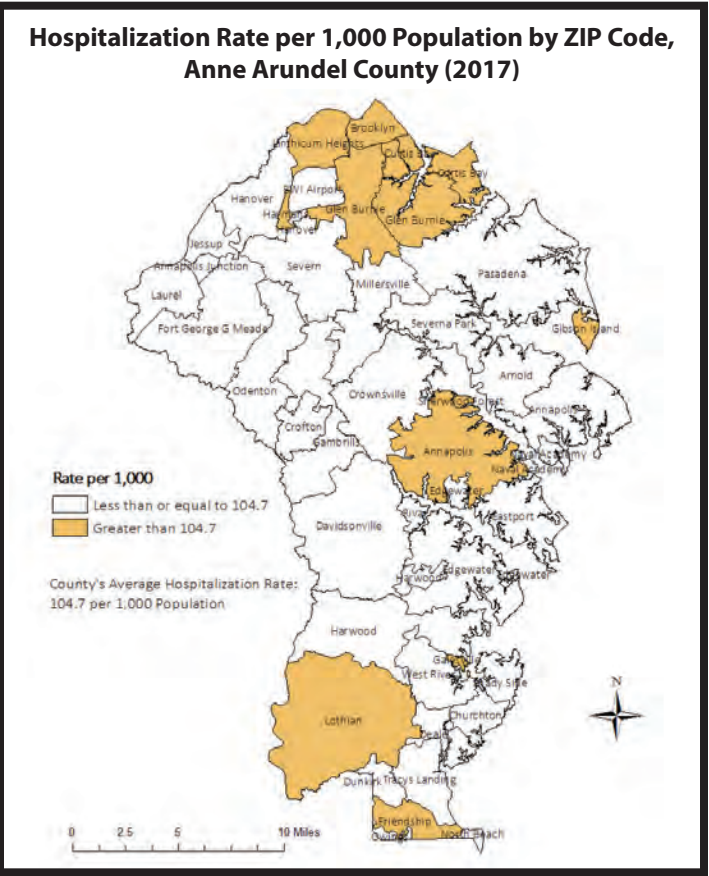

Inpatient Hospitalizations by ZIP Code, Anne Arundel County (2017)			
Town	Zip Code	Number	Rate per 1,000
Brooklyn	21225	2,396	163.9
Curtis Bay	21226	555	16.4
Friendship	20758	66	155.3
Galesville	20765	53	147.2
Glen Burnie (East)	21060	4,307	133.9
Glen Burnie (West)	21061	6,717	123.8

Anne Arundel County Department of Health, 2018

Lack of access to primary care, multiple health issues presenting at the same time, poverty, unhealthy food and lack of medication management were reasons given for the high rates. As one provider noted:

“We have seen a huge increase in the acuity of our patients... they have multiple issues; congestive heart failure, renal failure and diabetes... many patients with very complex and multiple issues along with poor social determinants of good health.”

Figure 24

Anne Arundel County Department of Health, 2017

The Social Determinants of Health

Many factors determine the state of a person’s overall wellness. The social determinants of health include income level, especially for those who live in poverty, access to healthy food, emotional stability, the cleanliness and safety of the environment, and access to health services. Although Anne Arundel County has a high standard of living overall, there are pockets of poverty and health access issues found in areas of high population density in North County, Annapolis, and in some of the rural areas of South County. Many focus group participants commented on the intractable nature of the pockets of poverty and distress, and a multiplication of the negative social determinants of a healthy life for some families. As one primary care provider commented:

“Back pain, headaches, insomnia; all the symptoms of stress. You start digging into the socio-economic factors – there are reasons for those things. They’re behind on the rent, they could get evicted, they haven’t had money to buy food. Sometimes there is a job loss involved.”

The majority of negative social and health indicators continue to polarize North and South County and Annapolis (Table 33). In South County, access to health care is very limited and there are few primary care doctors. Those residents with transportation often travel to Glen Burnie to access primary care. Owensville Primary Care is inaccessible to those residents who live in areas like Deale and have no transportation. Brooklyn Park (North County) is both a Medically Underserved and a Health Shortage Area and continues to have the highest indicators of need, as does Glen Burnie (Table 33).

Table 33

Rising Demographic, Socioeconomic, and Health Indicators by Zip Code, Anne Arundel County, 2017								
Zip Code	Area	Poverty Percentage	Percent without High School Diploma	Percent of Households on Snap	ED Visit Rate per 1,000	Percent Low Birthweight Infants	Preventable Hospitalization Rate per 1,000	Minority Population

Red = Higher than County Average

Overweight and Obesity

Overweight and obesity continue to create health issues for county residents. Many factors play a role in weight including low income, lifestyle, surrounding environment, access to healthy food, genetics and certain diseases. Overweight and obesity are determined using weight and height to determine a BMI or “body mass index” measure. Between 2012 and 2016, the percent of overweight adults (Body Mass Index of 25 to 29.9) 18 years and older in Anne Arundel County rose slightly from 36.7 percent to 37.2 percent while the state average fell (Figure 25).

The percent of residents who are classified as obese (Body Mass Index 30 and over) also rose from 27 to 31 percent and the state average also rose (Figure 26).

Obesity is prevalent in low income families in the county for a variety of reasons: their neighborhoods often lack full-service grocery stores and farmers’ markets, healthy food can be more expensive, there is no transportation to get to a supermarket, there is a greater availability of fast food restaurants selling cheap, filling food, and there are fewer recreational facilities for exercise. The streets may be unsafe and there is little for children to do.

Figure 25

Anne Arundel County Department of Health, 2018, (Maryland BFSS)

Figure 26

Anne Arundel County Department of Health, 2018, (Maryland BFSS)

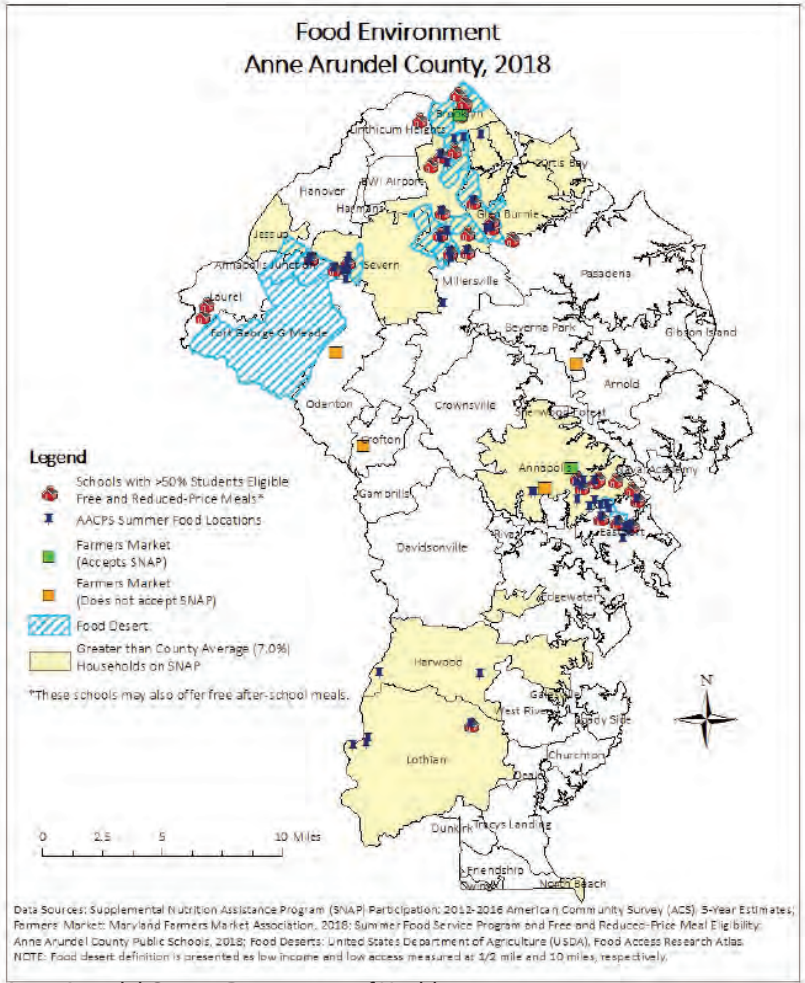

Access to Healthy Food

In 2018, over 13 percent or 74,522 county residents resided in a food desert, up from 12 percent in 2015. Food deserts are defined by the United States Department of Agriculture (USDA) as urban neighborhoods and rural towns without ready access to fresh, healthy and affordable food. Several of the county's low income communities are also mapped as food deserts (Figure 27). They do not have access to healthy food and they have no transportation to get to supermarkets. Unhealthy food is cheap and filling, an important asset for large families managing with few means. As one health provider noted:

“Many people don’t have access. They may have medical transportation to get to a doctor but they don’t have the transportation to get to a grocery store. If they get to the grocery store and are on the SNAP program, or whatever, they see apples are \$2.99 a pound, but the ramen noodles are 10 packs for \$1.”

Figure 27

Anne Arundel County Department of Health, 2018.

Domestic Violence

The Anne Arundel County Police Department tracks domestic violence by year and police district, including physical assaults with hands or fists, guns, and knives. Figure 28 shows all Domestic Violence incidents in the county from 2013 through the first six months of 2018. The data shows an upward trend although there was a dip in numbers for the 2015-2016 year. The statistics for the early 2018 year are alarming. The numbers for the six month period are almost as high as for the previous 12 months. These statistics confirm anecdotal data from police, schools and hospital personnel, who all reported a notable increase in domestic violence over the same period.

Figure 28

Anne Arundel County Police Department, 2018

Child Physical and Sexual Abuse

In 2018, the county's Child Advocacy Center investigated 326 sexual abuse cases, of which seven were for sexual assault.<sup>6</sup> Respondents noted a large increase in the number of child on child sexual assaults that are being reported by the school system and others. One commented that:

“Children are looking at pornography on their parent’s phones and tablets. It used to be that the child was the victim and the adults the perpetrators, but that’s not always the case now. Now we have five and six year olds doing inappropriate things. Kids are watching pornography at early ages.”

All child sexual assault and sexual abuse cases must go to the police department prior to a hand-off to social services. This process, and the limited number of police specialists, can cause back ups of over three months and then there may be 95 to 100 cases at a time sent to Department of Social Services (DSS). As one provider noted:

“Every report has to go through these guys before it comes to DSS. We’re often cold calling three months later.”

<sup>6</sup> Anne Arundel County Department of Social Services, 2018.

Sex Trafficking Victims

Anne Arundel County is in the top five jurisdictions in Maryland for sex trafficking.<sup>7</sup> The 50-mile radius surrounding BWI airport is becoming known as the third-most-lucrative area in the state for trafficking in people.<sup>8</sup> Anne Arundel County Police Department tracks the number of sex trafficking incidents for the county (Figure 29). While the numbers were stable between 2015 and 2017, data for the first 6 months of 2018 are showing an almost 100% increase in cases. There are only two detectives fully dedicated to human trafficking.

Figure 29

Anne Arundel County Police Department, 2018

Social Media as a Public Health Issue

Social media, including the active use of smart phones and tablets, is a major concern for residents and professionals in every area of the county. The constant access to electronic information is impacting every age group and demographic:

**Early Childhood.** Focus group participants reported babies as young as 12 months are regularly observed holding cell phones and tablets. One early childhood provider described this as ‘soothing by cell phone.’ Another commented:

“I hate to blame technology but youngsters at a very early age are being babysat by electronics, usually it’s an iPad or a cell phone. Then we’re asking them to sit quietly in a circle and say their ABCs.”

Many focus group participants commented on the number of parents with their eyes on their own cell phone rather than creating any interaction or eye contact with their children. Several suggested that the ease of electronic access to pornography for very young children is linked to rising child on child sexual abuse within the school system.

**Youth.** Increases in bullying, suicide and suicidal ideation for youth have been linked to the constant use of social media ‘apps’ such as Instagram and Snapchat. As one educator noted:

“Students will turn one another in: ‘look what she wrote online about me’ or ‘look what he posted online’ – it’s a disruption of the school day.”

Youth in low income communities are emulating international gang members, their colors and lifestyles by following their on-line presence. Body language, eye contact and social behavior of every kind is now lessened by the isolation caused by cell phone use. Several focus group participants noted that video-games are replacing outdoor play and recreation for many children.

**Adults.** All focus group participants commented on the increase in the use of social media by adults. Some commented on the isolation it causes and the need to look at every experience through the lens of a photo for Facebook. As one professional commented:

“People spend way too much time looking at other people’s activity on social feeds – how many likes did you get or not get? Let’s make sure we take some pictures so we can post them. How about enjoying the event you’re going to?”

Others linked the use of social media and rapid electronic communication with rising rates of drug use, depression and anxiety. As a faith community member commented:

“People are feeling more and more isolated because you can be surrounded by 500 friends (on social media) but you’re in your room by yourself.”

Limited English Proficient Residents

The numbers of Limited English Proficient residents are growing, especially in North County. Anecdotal information suggest their health needs are being served in community health clinics. While the numbers of bi-lingual health care professionals appear to be growing slowly, there is a lack of interpreters who understand medical terminology. As one provider recounted:

“We have a patient who saved months for his neurological care, to see a neurosurgeon for follow up; cost was \$715 for the visit which he knew ahead of time; and he and his wife scrimped and saved and they went to the appointment. The wife had to translate, she has no medical knowledge whatsoever and the patient left with no idea what the doctor said.”

Summary

Overall, the physical health of county residents and their access to health services have improved since 2014. However, in the densely populated areas of Glen Burnie and Brooklyn Park (Health Professional Shortage and Medically Underserved Areas), costs are being driven up by emergency room visits and increased hospitalization rates.

Needs

- Increased numbers of community health clinics, especially in Medically Underserved Areas
- A plan to recruit primary care physicians
- Translation services for limited English Proficient residents
- Access to specialist services for the uninsured and the Medicaid population
- Healthy living and preventative health care to avoid hospitalization
- Greater awareness of importance of prenatal care for pregnant women
- Increased focus on areas of high need and few resources: Brooklyn Park, Glen Burnie, and South County
- A plan to address the social determinants of health

Mental Health

The rise in behavioral health issues for every age group, and the lack of appropriate services and service providers, were major concerns for all participants in this needs assessment. Providers who don’t accept Medicaid and Medicare, and patients with inadequate health insurance, or no insurance, exacerbate the issue. Overall there has been a 70 percent increase in Anne Arundel County residents seeking mental health services since 2012; 16,348 residents were served by the county mental health agency in 2018 (Table 34). The two highest increases in residents served since 2016 are the early childhood population and those over age 65. Participants in this needs assessment shared many opinions as to why mental health issues are increasing, including poverty, isolation, social media, increasing societal violence and hostility, the fast pace of a technological world, and the reduction of stigma regarding mental health services. Several commented on the intergenerational and socio-economical nature of mental health issues. As one provider noted:

“I think you go back to the families that are struggling in poverty who are multi-generational and living together; it’s the hereditary piece. It’s the third generation bipolar schizophrenic whose child is showing ADHD acting out behaviors where we know we worked with mom or the grandmother 10 years ago. We’re dealing with more at an even younger age; you’re talking first and second graders.”

Table 34

Individuals Served in the Public Mental Health System (2012 – 2018)							
Age Range	FY 2012	FY 2016	FY 2017	2016 - 2017 % Change	FY 2018*	2017 - 2018 % Change	2012-2018 % Increase
Early Child (0-5)	392	460	492	7.0%	548	11.4%	40%

\* Based on claims paid through September 30, 2018.  
Anne Arundel County Mental Health Agency, 2018

The county’s hospital emergency departments are often the receiving facilities for behavioral health issues. In 2017, there were 12,446 behavioral health encounters; mood disorders accounted for 26.3 percent of those and over 20 percent were alcohol related. (Table 35).

Table 35

ED Encounters for Behavioral Health Conditions in Anne Arundel County (2017)			
	Condition	Frequency	Percent
1	Mood Disorders	3,277	26.3%
2	Alcohol-Related Disorders	2,546	20.8%
3	Substance-Related Disorders	2,212	17.8%
4	Anxiety Disorders	1,654	13.3%
5	Suicide and Intentional Self-Inflicted Injuries	724	5.8%

10	Miscellaneous Mental Health Disorders	112	0.9%
	Total	12,446	

Anne Arundel County Department of Health, 2018

Access to Care

The Affordable Care Act continues to increase access to mental health services through expanded Medicaid services. The total numbers served in the county public mental health system have increased 13 percent in two years, from 14,383 in 2016 to 16,348 in 2018 (Table 36). Those with private insurance struggle the most to access care due to limited coverage, high deductibles, time limits, and providers who will not accept private insurance. As one provider noted:

“To receive clinical mental health services, the co-pays and deductibles in the new insured world will break your back. If you’re living paycheck to paycheck and you need a 30 dollar co-pay once a week, for the next six weeks, that probably isn’t going to happen.”

Table 36

Three Year Comparison for Medicaid Insured and Uninsured Individuals					
	Persons Served				
	FY 2016	FY 2017	2016 -2017 % Change	FY 2018	2017 - 2018 % Change
Medicaid	13,824	14,626	5.8%	15,694	7.3%
Medicaid State Funded	1,923	2,342	21.8%	2,591	10.6%
Uninsured	746	488	-34.6%	642	31.6%
Total	14,383	15,220	5.8%	16,348	7.4%

Anne Arundel County Mental Health Agency, 2018

The number of out-patient mental health providers in the county continues to grow, an increase of 4.6 percent from 366 in 2014, to 383 in 2018. However, the ratio of mental health providers to residents in the county is much lower than the state (Table 37). The county lacks psychiatrists and geriatric psychiatrists, especially for those residents with dementia and Alzheimer’s disease. There is one Spanish-speaking psychiatrist in the entire county available to the Hispanic uninsured population. There are very few Spanish speaking mental health counselors.

Table 37

Mental Health Providers in Anne Arundel County, Maryland (2018)				
	Anne Arundel County Total	Anne Arundel County Ratio	Maryland Ratio	Top U.S. Counties (90th percentile)
Mental health providers	861	650:1	460:1	330:1

Anne Arundel County Department of Health, 2018

Residential services are a growing and urgent need. In Anne Arundel County, there are only 24 crisis temporary beds and only one inpatient psychiatric unit with 24 beds. The beds are almost always full. There are 263 beds for the chronically mentally ill scattered throughout the county. There are no residential services for adolescents. Both hospitals are currently expanding their mental health services to meet the community demand. University of Maryland Baltimore Washington Medical Center (UM-BWMC) recently added ten beds to their inpatient psychiatric unit, which will allow them to serve 650 more residents per year. Anne Arundel Medical Center (AAMC) broke ground on a new mental health hospital in 2018 that will add 16 inpatient beds and serve an estimated 900 patients when it opens in 2020. The need is overwhelming. As one provider noted:

“So if you come to our campus with a broken bone, there are 30 orthopedists who want to fix your bone. But if you come to our hospital with a broken soul, we’ve got two psychiatrists, only one of them on this campus.”

The Opioid Epidemic

Prescription Opioids

Prescription opioid addiction is now a major public health crisis. Although Anne Arundel County is the fifth largest county in the state in terms of population, it had the third highest rate of prescription opioid related deaths as of 2017 (Figure 30).

Figure 30

Maryland Department of Health, 2018

County health professionals acknowledge that while opioids are helpful to patients in extreme pain, opioid addiction is a major issue. The medical community has tightened regulations and behaviors regarding opioids, and 2017 saw the first decrease in prescription overdose use since 2013, from 48 to 43 deaths.<sup>1</sup> According to one provider, it is important to manage pain but at the same time make sure excess supply is diminished:

“We don’t want to withhold pain medicine from patients (who need it) but decrease the excess supply that is sitting out there in everyone’s medicine cabinets.”

Opioid/Heroin Overdoses

In 2018, Anne Arundel County police reported almost 1,100 opioid-related overdoses occurring within the county, a 167 percent increase since 2014 (Figure 31).

Figure 31

Anne Arundel County Police Department, 2018. Note: In 2018, there were 116 Persons with 2 or more overdoses.

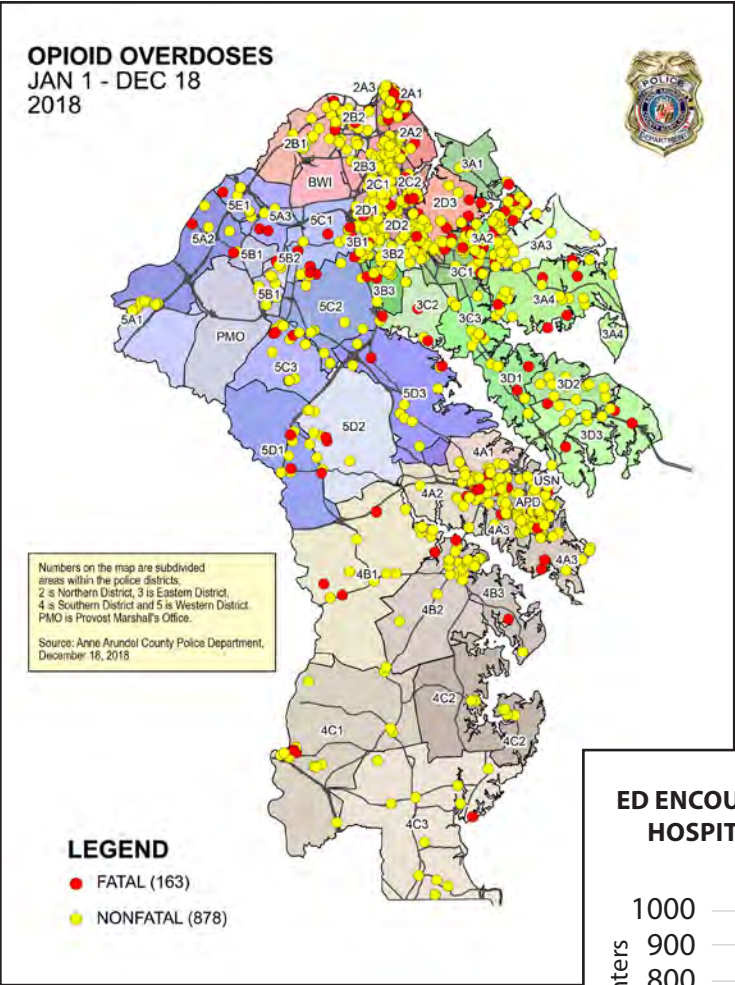

In 2018, there were 1,083 total overdoses year to date, a 1.3 percent decrease from 1,097 in 2017 (Figure 31). Several county initiatives have contributed to that reduction including the very successful Safe Stations program. However, the rate of fatal overdoses continues to increase, driven by the introduction of fentanyl into the community. Fentanyl-related deaths in the county have increased significantly since 2013 and surpassed heroin related deaths in 2018. Also, in 2018 there were 166 fatal overdoses compared to 155 in 2017, a 7.1 percent increase.

<sup>1</sup> Maryland Department of Health, *Unintentional Drug-and Alcohol-Related Intoxication Deaths in Maryland, 2017*.

As with other county issues, geography plays a part. The majority of overdoses occur in North County and Annapolis. Several participants pointed to Glen Burnie as the number one area for opioid availability. As one provider noted:

“I would like to see more suboxone providers in Glen Burnie because we know that this is a heroin saturated zip code and there are very few docs that prescribe suboxone.”

Figure 32

Anne Arundel County Police Department, 2018

Opioid related overdoses are also causing capacity issues for hospital emergency departments. The rate of emergency department opioid overdose encounters for Anne Arundel County residents has risen 91 percent since 2014 from 489 to 932 (Figures 32 and 33). The percentages are uneven for the two county hospitals. The University of Maryland Baltimore Washington Medical Center accounted for 45 percent of the hospital encounters for opioid related diagnoses through October 2018, whereas Anne Arundel Medical Center accounted for 19 percent.

Figure 33

Anne Arundel County Department of Health, 2018

Secondary Victims of the Opioid Crisis

The current opioid crisis has many victims. The number of newborns assessed positive for substances in their systems, including methadone, has risen 144 percent since 2014 from 74 to 181.<sup>2</sup> Grandparents and great-grandparents are raising children with little governmental help. Many are on fixed incomes and have health and other issues to contend with. As one participant pointed out:

“We need support for these grandparents. I have an 85 year old client who is a retired nurse raising a second grader. It’s actually her great-grandchild. She came to a meeting with a notebook like I had, trying to keep track of the systems and how to navigate them.”

According to all participants, the children of opioid victims are traumatized and ashamed. Several suggested we need narcotics support groups for teen family members. Young children born into homes where heroin is used may be neglected, may have spent periods homeless or living in a tent, as was the case of an 18 month old Glen Burnie child in 2017. Participants in this needs assessment cited numerous examples of very young children left alone or strapped into a car seat 24 hours a day. As one provider noted:

“Sometimes we’re not seeing these kids ‘til kindergarten or coming into pre-k, but when they were two years old, dad was a heroin addict and put the kid in the closet.”

Participants in this needs assessment also explained that many teens who have an addicted single mother or father, or who are living with grandparents, are taking care of their siblings, finding places to sleep, selling drugs for rent, and visiting food pantries. As one participant commented:

“Like the 17 year-old who finds her mom dead of an overdose in a hotel and goes to school the next day and begs the school for help. This epidemic is not going away...every family is impacted so what are we doing with that? You’ve got fathers, mothers, aunts, and uncles who are dying. What are we doing with that?”

Other Substance Use

Alcohol

Alcohol use continues to be an acceptable social norm in the county. The number of alcohol related deaths increased by 273 percent between 2012 and 2016, from 15 to 56 deaths. In 2017, the number of alcohol-related deaths declined to 37 (Figure 34). According to the Maryland Department of Health 2016 High School Youth Risk Behavior Survey, the number of students who acknowledged driving a car, or driving within a car with someone who had been using alcohol, has reduced significantly since 2014.

Figure 34

Maryland Department of Health, 2018

<sup>2</sup> Anne Arundel County Department of Social Services, 2018.

Other Drugs

Several participants noted a rise in the use of ‘street drugs’ such as PCP, crystal meth and cocaine. Anne Arundel County was third in the state in 2017 for cocaine ingestion deaths with a 400 percent increase between 2012 and 2017, from 13 deaths to 66 deaths<sup>3</sup> (Figure 35). The first quarter of 2018 showed a similar trend with 23 deaths from cocaine use. Many participants noted the use of cannabis in students as young as 11, and the intergenerational use of street drugs.

Figure 35

Maryland Department of Health, 2018

Summary

Behavioral Health issues are a major worry for participants in this needs assessment. Mental health issues at either end of the age scale, early childhood and seniors, are rising very rapidly. For the senior population, these issues may be co-occurring with senility or dementia.

Everyone who participated in this needs assessment acknowledged the enormous efforts made by the county and county hospitals to manage the opioid/heroin crisis, yet the progress is little and slow.

Needs and Gaps:

- More providers of psychiatric, geriatric-psychiatric, counseling and substance abuse services, especially Spanish speaking services
- Residential mental health and substance abuse beds, especially for the adolescent population
- Further support for the Anne Arundel County Mental Health Agency’s very successful Crisis Intervention system and the Safe Stations program
- Integration of social and behavioral health services
- Crisis beds for immediate response and to relieve the emergency departments
- Support for seniors with co-occurring mental health issues and dementia

<sup>3</sup> Maryland Department of Health, *Unintentional Drug-and Alcohol-Related Intoxication Deaths in Maryland*, 2017.

Senior Population

The number of Americans over the age of 60 is increasing. The large demographic of Baby Boomers (those born between 1946 and 1964) is now defining the aging population; 10,000 people in the nation turn 65 every day.<sup>1</sup> Seniors are also living longer through advanced medical care, early diagnosis and treatment of diseases, and better nutrition.

‘Senior’ is a very broad term for a group that now spans almost four decades. Service providers see the aging population in three distinct groups: 55-70 years of age, 70-85 years of age, and 85 and older. Each group has very distinct needs emotionally, physically and psychologically, yet they tend to get treated as one large demographic.

Since 2013, the number of Anne Arundel County residents over age 60 has grown from 99,084 to 107,523, an increase of 8.6 percent. The largest increase is seen in the 65-74 year old age group, with a smaller increase for the 85 and older group. (Figure 36). As each group continues to age, their requirements for support and services increase.

Figure 36

U.S. Census Bureau, American Community Survey, 2016 Estimates

The county’s senior population is expected to continue rapid growth until 2030 when the trend line begins to dip (Figure 37) . The Maryland Department of Aging State Plan (2017) predicts there will be a 40.49% increase in seniors living in Anne Arundel County during this period from 111,000 seniors to over 150,000 in 2030.

<sup>1</sup> U.S. Department of Health & Human Services, *Aging*, 2018.

Figure 37

Maryland Department of Aging, 2017

Economics

Households headed by people ages 65 and over reported a median income of \$58,559 nationally in 2016, according to the Administration on Aging Administration for Community Living (AAACL). More than 85 percent of people 65 and older receive Social Security. The average Social Security income for all retired workers in 2018 is \$1,404 per month, a \$44 increase over 2017. Among elderly Social Security beneficiaries, 50 percent of married couples and 71 percent of unmarried persons receive 50 percent or more of their income from Social Security. Generally, women receive less from Social Security due to work breaks to raise children and lower earnings over time.<sup>2</sup>

In Anne Arundel County, the median income for the 65 and older population was \$47,976 in 2016. Just over six percent of county seniors (almost 5,000) are living below 100 percent of the poverty line, lower than the national average of 9.3 percent.<sup>3</sup>

Housing

Affordable and appropriate housing is one of the biggest challenges seniors face in Anne Arundel County. Twenty-seven percent of seniors live alone, and 72 percent of those are single females. The majority of seniors live with family members, either because they are financially and/or physically unable to live alone, or because their adult children cannot find affordable housing in the county (Figure 38). Sometimes three and four generations of family members find it necessary to live together. According to 2016 U.S. Census estimates, there are 9,212 county households where three generations of family members live together in the same house. Residents from the sandwich generation (those managing children and seniors) often become unpaid caregivers. Twenty-seven percent of them have stopped working to care for a loved one according to the Genworth Cost of Care Survey (2018).

<sup>2</sup> Social Security Administration, *Social Security is Important to Women*, 2018.

<sup>3</sup> Administration on Aging Administration for Community Living, *Aging and Disability in America*, 2018.

Figure 38

Source: Census.gov

There are some subsidized housing options under which the renter pays 30 percent of total adjusted income (including income from assets). Waiting lists are maintained by the Housing Commission of Anne Arundel County, the Annapolis Housing Authority, and privately managed Section 8 complexes. There are 1,142 elderly families on the county’s public housing wait list. The average wait time is 685 days.<sup>4</sup> Monthly costs for every type of assisted care in the Baltimore area are very high (Table 38) ranging from \$1,880 per month for adult day care to \$10,585 per month in a private room.

Table 38

Average Monthly Cost of Long Term Care Services in Maryland			
Care Type		Baltimore Area, MD	National Average Cost
Adult Day Care	Weekdays only	\$1,880	\$1,492
Assisted Living		\$4,250	\$3,600
Homemaker Services	44 hours per week	\$4,004	\$3,813
Home Health Care	44 hours per week	\$3,813	\$3,813
Nursing Home	Semi-Private (double occupancy room for one person)	\$9,733	\$6,692
	Private (single occupancy room for one person)	\$10,585	\$7,604

Genworth Cost of Care Survey, 2018

Participants from the medical community commented on the number of seniors who are admitted to the hospital, often through the emergency room, who have no home to return to. Some take up hospital beds for months at a time, at a very high cost, until guardianship can be determined and a place found for them. According to providers, guardianship programs for seniors have increased fourfold since 2014. As one participant explained:

“Sometimes there is family but they’re estranged, or they might just be far away and feel like they don’t want to take on the responsibility; all sorts of reasons for it. But the cases are very complex; many of the folks have very little means, some of them have some assets and income, but sometimes it’s very hard to place them. It can be very hard to find appropriate housing.”

There is a long waiting list for Senior Care, a program operated by the County Department of Aging and Disabilities, that helps seniors age in place. The program costs \$300-600 per month, as opposed to thousands of dollars for nursing home care. Seniors often need assisted living as they age, which is difficult to afford on a fixed income.

<sup>4</sup> Housing Commission of Anne Arundel County, 2018.

Health

Most seniors have at least one chronic health condition, and many have multiple conditions. The top five conditions seniors suffer from are hypertension, hyperlipidemia, arthritis, ischemic heart disease, and diabetes.<sup>5</sup> According to participants in this needs assessment, urinary tract infections are common, largely due to decreased fluid intake in the elderly. Sepsis and pneumonia are also common, especially during a hospital stay.

Multiple participants noted the over-prescription of medications to seniors. Many prescriptions are multiples of the same kind of medicine and do not react well together. Seniors often have issues remembering to take pills at the right time and in the right dose. As one participant noted:

“We’ve asked seniors how many medications they are on; some are on as many as 20 medications, including 3 or 4 for high blood pressure.”

The number of Medicare beneficiaries is rising in the county as a result of the growing senior population. The county has served almost 3,000 new beneficiaries in the last three years. The number of people who are also eligible for Medicaid due to low income rose from 10.9 percent to 11.3 percent in three years (Table 39). Half of all people on Medicare have incomes less than \$26,200.<sup>6</sup>

Table 39

Medicare Beneficiaries in Anne Arundel County 2013 - 2016 Comparison		
Beneficiary Demographic Characteristics	2013 (Number or Percentage)	2016 (Number or Percentage)
Beneficiaries with Part A & Part B	75,607	78,529
Fee-for-service Beneficiaries	69,420	70,606
Medicare Advantage (MA) Beneficiaries	6,187	7,923
Average Age	72 years	72 years
Female	56.2%	56.5%
Male	43.8%	43.5%
White, NH	82.2%	81.5%
Black	31.1%	12.5%
Hispanic, Any Race	1.3%	1.6%
Eligible for Medicaid	10.9%	11.3%

Behavioral Health

Demand for mental health services has risen more steeply for those age 65 and older than for any other demographic, increasing 102% since 2012 (see chart on page 55)<sup>7</sup>

Loneliness and isolation often results in anxiety and depression. As seniors live longer, an increasing number develop dementia or Alzheimer’s disease. There are no mental health services for seniors in the county that accept Medicare and very few geriatric psychiatrists. There are very few in-home services that offer evaluations for those with mental health issues and/or dementia. Those that do exist don’t accept Medicaid or Medicare. According to participants, in times of real crisis, Medicare eligible seniors may be referred as far away as Georgia for mental health care. There are many elderly couples in the county who are caring for each other. When one or both become too frail, they are often separated in nursing homes or acute care facilities. Currently there are no nursing facilities that allow senior couples to stay together. As one participant noted:

“You’ve got couples that live into their 90’s and one has dementia and one doesn’t. We put them in the hospital or in assisted living and separate them which causes an increase in loneliness and despair... There’s no reason why two people who have been married for 60 years can’t be in the same room together.”

Substance abuse also occurs in the elderly. According to participants, seniors become addicted to pain medication through pain clinics and prescriptions from primary care providers. They are often prescribed medication for anxiety and depression. There are no substance abuse treatment services through Medicare. As one provider commented:

“We’re also seeing quite a bit of benzo addiction and people prescribed Xanax, and unfortunately we are dealing with opioid addictions. We have 67 year old heroin addicts right now because of opioid addiction.”

Transportation

As seniors age, they may be physically unable to drive, or prefer not to. They depend on public transportation services to take them from Point A to Point B. There are only two forms of transportation for the elderly population: Medicaid medical transportation for those eligible and the county’s ‘on demand’ partial transit system. The age for the latter service has been increased to 65 and the number of available vans has been decreased to twelve. Many respondents commented on the need for transportation for seniors: to the grocery store, a hairdresser’s appointment or a visit to the local senior center. These activities help address the loneliness and isolation experienced by our aging population. As one participant noted:

“Now it’s going to be even tougher when it comes to things like medications, groceries and other everyday needs, they just don’t get them. ‘I couldn’t get there so I didn’t buy them.’”

Kinship & Guardianship

Kinship caregivers are those grandparents, relatives and friends who agree, formally and informally, to raise their grandchildren and other children when parents are no longer able to. The number of grandparents raising grandchildren in the county has increased over 34 percent between 2014 and 2017. The opioid and heroin crisis may be partly responsible for the increase, as parents overdose or fall into addiction. There are few formal supports for kinship families and many issues to struggle with. When kinship caregivers do not have legal guardianship they may be unable to sign for medical and other care for the children in their charge. Legal guardianship procedures can take months. Many kinship caregivers are on a fixed or limited income. As one provider noted:

“It’s the grandparents and great-grandparents caring for babies or school-aged children that they don’t have a clue what to do with. They do not have the financial assistance that they need to take care of them and they don’t have the room. They are depleting their savings, they are on a fixed income and that population is growing tremendously. Almost 50 percent of our calls for help are from kinship families.”

Needs and Gaps

- Aging in place is the preferred method of care. As seniors age they are likely to develop a need for some assistance with daily living. Affordable assisted living is a huge need for this demographic.
- Mental health services and especially geriatric psychiatry are a gap in services for senior residents, especially those that rely on Medicare and/or Medicaid.
- The over-prescription of every type of medication was commented on many times during this needs assessment. Some medical facilities have a pharmacist review medications when patients enter, but seniors may see several medical and mental health providers, all of whom may prescribe medication for a specific issue without looking at the entire picture of a patient’s medications.
- The number of kinship caregivers who are also seniors is growing in the county. There is a huge need for financial and other supports for such families. Without formal legal guardianship their ability to act in the place of the parent is sorely limited.
- As more seniors age, demand will increase for transportation services to help with daily living.

<sup>7</sup> Anne Arundel County Mental Health Agency, 2018.

# Needs Assessment Summary

Anne Arundel County is a wonderful place to live for most residents. In 2018, there is low unemployment, high median household income, a good public school system, cultural diversity and acres of natural resources for recreation. Most residents are able to access healthcare services. The growing need for behavioral health services for all ages requires attention from county health leaders. The consequences of increased social media use are causing negative health and behavioral problems throughout the community. Increasing aggression and violence in schools, hospitals and other systems should be a huge concern to county leadership.

Deep and stubborn pockets of poverty in North and South County and in the city of Annapolis require focused attention and effective collaborative solutions. Low income families, youth and seniors regularly encounter barriers to progress.

The three big needs in the county—transportation, affordable housing and affordable quality child care—remain unchanged since 2009. Public and private investments are needed to advance progress for all.

## About the Community Foundation of Anne Arundel County

In 1998 a group of community leaders gathered to consider how they might make a substantial and long-term difference in our community. Their vision was to create a Community Foundation, a permanent charitable foundation that would provide funds needed to create a better quality of life for all residents in Anne Arundel County for as long as the foundation exists. Under their leadership, the Community Foundation of Anne Arundel County (CFAAC) was born and is now one of more than 800 community foundations across the country. CFAAC is certified for operational and legal excellence and accountability with the National Standards for U.S. Community Foundations. CFAAC currently holds 126 funds and manages more than \$14 million in assets.

CFAAC is a 501(c)3 nonprofit organization that seeks to elevate philanthropy in the county. We help donors meet their financial and philanthropic goals through donor advised funds while helping to build and sustain community through grant making. CFAAC is a significant contributor to philanthropic community leadership in the county by helping to harness the power of collective giving to address persistent community needs today and for generations to come. We partner with donors to maximize the impact of their philanthropic investments for the long-term and make it easy, effective and accessible to everyone.

## ACKNOWLEDGMENTS

The Community Foundation of Anne Arundel County acknowledges with gratitude the people who made *Poverty Amidst Plenty VI* possible.

- Dr. Pamela M. Brown for compiling the extensive data and for writing the report with assistance from Lisa Kovacs.
- Former CFAAC Board members Martha Blaxall and Cindy O'Neill for their countless hours of planning, revising and aligning content and editorial guidance, and Anne Hamel and Maureen O'Neill for editing support.
- CFAAC staff Karaline Kessler and Amy Francis for planning, project management, and logistical support from beginning to end.
- Gina Dwyer, IdeaBox Creative, for layout and design.
